**Answer: A** Explanation: A loopback with merge option needs to be used.

**NEW QUESTION: 2** Sie entwickeln Abfragen und gespeicherte Prozeduren, um eine Branchen-anwendung zu unterstützen. Sie müssen die entsprechende Isolationsstufe verwenden, die auf dem Szenario basiert. Welche Isolationsstufen sollten Sie implementieren? Wählen Sie zum Beantworten die entsprechende Isolationsstufe für jedes Szenario im Antwortbereich aus. Jede Isolationsstufe darf nur einmal verwendet werden. HINWEIS: Jede richtige Auswahl ist einen Punkt wert.  
**Answer:** Explanation: Explanation  
Box 1: READ UNCOMMITTED  
Transactions running at the READ UNCOMMITTED level do not issue shared locks to prevent other transactions from modifying data read by the current transaction. READ UNCOMMITTED transactions are also not blocked by exclusive locks that would prevent the current transaction from reading rows that have been modified but not committed by other transactions. When this option is set, it is possible to read uncommitted modifications, which are called dirty reads. Values in the data can be changed and rows can appear or disappear in the data set before the end of the transaction.  
Box 2: READ COMMITTED  
READ COMMITTED specifies that statements cannot read data that has been modified but not committed by other transactions.  
SERIALIZABLE specifies that statements cannot read data that has been modified but not yet committed by other transactions.  
Box 3: REPEATABLE READ  
REPEATABLE READ specifies that statements cannot read data that has been modified but not yet committed by other transactions and that no other transactions can modify data that has been read by the current transaction until the current transaction completes.  
Box 4: SNAPSHOT  
If

READ\_COMMITTED\_SNAPSHOT is set to ON, the Database Engine uses row versioning to present each statement with a transactionally consistent snapshot of the data as it existed at the start of the statement. References:
