NEW QUESTION: 2Which backup method is additive because the time and tape space required for each night's backup grows during the week as it copies the day's changed files and the previous days' changed files up to the last full backup?**A.** full backup method.**B.** tape backup method.**C.** incremental backup method.**D.** differential backup method.**Answer: D****Explanation:** The Differential Backup Method is additive because the time and tape space required for each night's backup grows during the week as it copies the day's changed files and the previous days' changed files up to the last full backup. Archive BitsUnless you've done a lot of backups in your time you've probably never heard of an Archive Bit. An archive bit is, essentially, a tag that is attached to every file. In actuality, it is a binary digit that is set on or off in the file, but that's crummy technical jargon that doesn't really tell us anything. For the sake of our discussion, just think of it as the flag on a mail box. If the flag is up, it means the file has been changed. If it's down, then the file is unchanged.Archive bits let the backup software know what needs to be backed up. The differential and incremental backup types rely on the archive bit to direct them. Backup TypesFull or Normal The "Full" or "normal" backup type is the most standard. This is the backup type that you would use if you wanted to backup every file in a given folder or drive. It backs up everything you direct it to regardless of what the archive bit says. It also resets all archive bits (puts the flags down). Most backup software, including the built-in Windows backup software, lets you select down to the individual file that you want backed up. You can also choose to backup things like the "system state".Incremental When you schedule an incremental backup, you are in essence instructing the software to only backup files that have been changed, or files that have their flag up. After the incremental backup of that file has occurred, that flag will go back down. If you perform a normal backup on Monday, then an incremental backup on Wednesday, the only files that will be backed up are those that have changed since Monday. If on Thursday someone deletes a file by accident, in order to get it back you will have to restore the full backup from Monday, followed by the Incremental backup from Wednesday.Differential Differential backups are similar to incremental backups in that they only backup files with their archive bit, or flag, up. However, when a differential backup occurs it does not reset those archive bits which means, if the following day, another differential backup occurs, it will back up that file again regardless of whether that file has been

changed or not. Source: KRUTZ, Ronald L. & VINES, Russel D., The CISSP Prep Guide: Mastering the Ten Domains of Computer Security, 2001, John Wiley & Sons, Page 69. A. Ask them to sit quietly in a chair for a few minutes. **B.** All of the above **C.** Thoroughly explain the exercise test. **D.** Familiarize them with the exercise equipment by brief practice. **Answer: B**

NEW QUESTION: 4 リスク管理プログラムは次のことが期待されます。 **A.** 固有のリスクをすべて取り除きます。 **B.** 制御リスクをゼロに減らします。 **C.** 残留リスクを許容可能なレベルに維持します。 **D.** すべての脅威に対して予防制御を実装します。

Answer: C Explanation: 説明

リスク管理の目的は、すべての残留リスクがビジネスに受け入れられるレベルに維持されるようにすることです。特定されたすべてのリスクを除去したり、すべての脅威の制御を実装したりすることは意図されていません。コントロールのリスク、つまりコントロールが効果的でない可能性があることは、プログラムの構成要素ですが、ゼロに減少する可能性は低いです。
