**NEW QUESTION: 1**Which three options relate to event-driven RRM? (Choose three.)**A.** minimum of AP, WLC, WCS, and MSE**B.** specific AP models**C.** configurable in WLC at 802.11b/g/n > RRM > DCA**D.** any 802.11n AP models**E.** configurable in WLC at 802.11b/g/n > RRM > TPC**F.** minimum of AP, WLC, and WCS**G.** minimum of AP and WLC**Answer: B,C,G**

**NEW QUESTION: 2**You have an Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.From Azure AD Privileged Identity Management (PIM), you configure the settings for the Security Administrator role as shown in the following exhibit. From PIM, you assign the Security Administrator role to the following groups:* Group1: Active assignment type, permanently assigned* Group2: Eligible assignment type, permanently eligibleFor each of the following statements, select Yes if the statement is true. Otherwise, select No.NOTE: Each correct selection is worth one point.**Answer:** Explanation:Explanation:Box 1: YesEligible Type: A role assignment that requires a user to perform one or more actions to use the role. If a user has been made eligible for a role, that means they can activate the role when they need to perform privileged tasks. There's no difference in the access given to someone with a permanent versus an eligible role assignment. The only difference is that some people don't need that access all the time.You can choose from two assignment duration options for each assignment type (eligible and active) when you configure settings for a role. These options become the default maximum duration when a user is assigned to the role in Privileged Identity Management.Use the Activation maximum duration slider to set the maximum time, in hours, that a role stays active before it expires. This value can be from one to 24 hours.Box 2: YesActive Type: A role assignment that doesn't require a user to perform any action to use the role. Users assigned as active have the privileges assigned to the role Box 3: Yes User3 is member of Group2.Reference: https://docs.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-configure https://docs.microsoft.com/bs-cyrl-ba/azure/active-directory/privileged-identity-management/pim-resource-roles-configure-role-settings

**NEW QUESTION: 3**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have a

deployment of System Center Configuration Manager that collects the hardware inventory of Windows and Linux client computers.You need to capture additional information about the hardware on the Linux computers.Solution: You create a custom hardware inventory provider by using the OMI source.Does this meet the goal?**A. No****B. Yes****Answer: A**
