PaaSソリューションのディザスタリカバリ要件を満たすために何を実装する必要がありますか？**A.** アベイラビリティゾーン**B.** フェイルオーバーグループ**C.** ジオレプリケーション**D.** 常時オンの可用性グループ

Answer: B Explanation: Scenario: In the event of an Azure regional outage, ensure that the customers can access the PaaS solution with minimal downtime. The solution must provide automatic failover. The auto-failover groups feature allows you to manage the replication and failover of a group of databases on a server or all databases in a managed instance to another region. It is a declarative abstraction on top of the existing active geo-replication feature, designed to simplify deployment and management of geo-replicated databases at scale. You can initiate failover manually or you can delegate it to the Azure service based on a user-defined policy. The latter option allows you to automatically recover multiple related databases in a secondary region after a catastrophic failure or other unplanned event that results in full or partial loss of the SQL Database or SQL Managed Instance availability in the primary region. Answer: C

NEW QUESTION: 3 **Answer:** Explanation: Explanation Target 1: noStore="false" The page that has the OutputCacheProfile.NoStore property set to true issues a response specifying in its header to prevent secondary storage of sensitive information. Target 2: VaryByParam="clinicID" The VaryByParam is a semicolon-delimited set of parameters used to vary the cached output. It allows varying the cached output by GET query string or form POST parameters. For instance, you can vary the user-control output to the cache by specifying the

user-control name along with either a query string or a form POST parameter. Incorrect: Not varyByControl="ClinicID" The VaryByControl is a semicolon-delimited set of IDs of controls to be cached. Target 3: duration=129600" The Duration represents the time in seconds that the page or user control is cached. Setting this property establishes an expiration policy for HTTP responses from the page or control to which it applies and will automatically cause the caching of their output. 129600 seconds is 36 hours (60*60*36).
