NEW QUESTION: 1 Which of the following statements describe the network shown in the graphic? (Choose two.)
A. There are two broadcast domains in the network.
B. There are seven collision domains in the network.
C. There are four collision domains in the network.
D. There are six broadcast domains in the network.
E. There are four broadcast domains in the network.
F. There are five collision domains in the network.
Answer: A, B
Explanation: Only router can break up broadcast domains so in the exhibit there are 2 broadcast domains: from e0 interface to the left is a broadcast domain and from e1 interface to the right is another broadcast domain ->. Both router and switch can break up collision domains so there is only 1 collision domain on the left of the router (because hub doesn't break up collision domain) and there are 6 collision domains on the right of the router (1 collision domain from e1 interface to the switch + 5 collision domains for 5 PCs in Production) ->.

NEW QUESTION: 2 **HOTSPOT** Your network contains 25 Web servers that run Windows Server 2012 R2. You need to configure auditing policies that meet the following requirements: - Generate an event each time a new process is created. - Generate an event each time a user attempts to access a file share. Which two auditing policies should you configure? To answer, select the appropriate two auditing policies in the answer area.
Answer Area
Answer:
Explanation:
*Audit object access Determines whether to audit the event of a user accessing an object (for example, file, folder, registry key, printer, and so forth) which has its own system access control list (SACL) specified.
*Audit process tracking This security setting determines whether to audit detailed tracking information for events such as program activation, process exit, handle duplication, and indirect object access.
