NEW QUESTION: 1
会社の方針では、サポートされていないすべてのオペレーティングシステムをネットワークから削除することを要求しています。セキュリティ管理者は、これらのシステムをネットワークから切断する目的で、これらのシステムを識別するためにネットワークベースのツールを組み合わせて使用しています。次のツールのどれ、または使用中のツールからの出力を使用して、セキュリティ管理者がローカル企業ネットワークで使用中のオペレーティングシステムをおおよそ判断することができますか。（3を選択）**A.** Nmap**B.** 443 / tcp open http**C.** dig host.company.com**D.** パスワードクラッカー**E.** http://www.company.org/documents_private/index.php?search=string#&topic=windows&tcp=パケット%20キャプチャ＆cookie = wokdjwalkjcnie61lkasdf2aliser4**F.** 09：18：16.262743 IPアドレス（tos 0x0、ttl 64、id 9870、オフセット0、フラグ[なし]、プロトTCP（6）、長さ40）192.168.1.3.1051> 10.46.3.7.80：フラグ[なし]、cksum 0x1800（正しい）、勝利512、長さ0**G.** パッシブバナー掴み**Answer: A,F,G**Explanation:ExplanationBanner grabbing and operating system identification can also be defined as fingerprinting the TCP/IP stack.Banner grabbing is the process of opening a connection and reading the banner or response sent by the application.The output displayed in option F includes information commonly examined to fingerprint the OS.Nmap provides features that include host discovery, as well as service and operating system detection.

NEW QUESTION: 2A company's service for video game recommendations has just gone viral The company has new users from all over the world The website for the service is hosted on a set of Amazon EC2 instances in an Auto Scaling group behind an Application Load Balancer (ALB). The website consists of static content with different resources being loaded depending on the device type.Users recently reported that the load time for the website has increased Administrators are reporting high loads on the EC2 instances that host the service.Which set actions should a solutions architect take to improve response times?**A.** Move content to Amazon S3 Create an Amazon CloudFront distribution to serve content out of the S3 bucket Use the User-Agent HTTP header to load different content**B.** Move content to Amazon S3 Create an Amazon CloudFront distribution to serve content out of the S3 bucket Use Lambda@Edge to load different resources based on the User-Agent HTTP header**C.** Create a separate ALB for each device type. Create one Auto Scaling group behind each ALB Use Amazon Route 53 to route to different ALBs depending on the User-Agent HTTP header**D.** Create separate Auto Scaling groups based on device types Switch to a Network Load Balancer (NLB) Use the

User-Agent HTTP header in the NLB to route to a different set of EC2 instances.**Answer: A**

NEW QUESTION: 3 Your company has a main office and five branch offices. The branch offices connect to the main office by using a WAN link.Each branch office has 100 client computers that run Windows XP or Windows Vista. All servers run Windows Server 2008 R2.The main office has a Windows Server Update Services (WSUS) server.You need to minimize the amount of WAN traffic used to download updates from the WSUS server.What should you do?**A.** From Windows Explorer, enable Offline Files.**B.** From a Group Policy, enable the Set BranchCache Hosted Cache mode setting.**C.** From a Group Policy, enable the Set BranchCache Distributed Cache mode setting.**D.** From a Group Policy, enable Allow BITS Peercaching.**Answer: D**Explanation: Windows Update and Microsoft Update use the Background Intelligent Transfer Service (BITS) to download updates. You can optimize download performance by configuring BITS through Group Policy.Peer caching is a feature of BITS that enables peer computers to share files. Peer computers are computers that have the peer caching feature enabled and that are located in the same subnet. If peer caching is enabled on a computer, Automatic Updates instructs BITS to make downloaded files available to the computer's peers. When updates are downloaded, BITS caches them. When another peer caching-enabled computer tries to download the same update, BITS sends a multicast request to all peers. If peer computers respond to the request, BITS downloads the file from the first peer computer to respond. If the download from the peer computer fails or take too long, BITS continues the download from the WSUS server or from Microsoft Update.Peer caching can optimize bandwidth in the following ways:-Decreases the data that is transferred from the WSUS server to client computers because computers in the same subnet will usually download the updates from each other.-Decreases the data that is transferred across the WAN when some or all of the client computers of a WSUS server are located in different locations.-Decreases the data that is transferred across the Internet if WSUS client computers that are located in the same subnet are configured to download updates from Microsoft Update. http://technet.microsoft.com/en-us/library/dd939927(v=ws.10).aspx

NEW QUESTION: 4 As an implementation consultant, you are involved in the migration activity. If, during the premigration stage, the duplicate person records are merged, can you state the reason for this?**A.** because person records are dependent on legislation**B.** because person records are global in Fusion**C.** because one person can have only one work relationship**D.** because person records are not Global in fusion**Answer: B**Explanation:A single global person record tracks information for employees or contingent workers. The single person record may then be associated with multiple work relationships in the employment model. This increases data integrity while reducing administrative overhead and provides for enhanced reporting capabilities.Reference: Oracle Fusion Human Capital Management, Oracle Data Sheet
