Answer: A,BExplanation:ExplanationThe AWS Documentation mentions some key aspects with regards to the configuration of On-premise AD with AWS One is the Groups configuration in AD Active Directory Configuration Determining how you will create and delineate your AD groups and IAM roles in AWS is crucial to how you secure access to your account and manage resources. SAML assertions to the AWS environment and the respective IAM role access will be managed through regular expression (regex) matching between your on-premises AD group name to an AWS IAM role.One approach for creating the AD groups that uniquely identify the AWS IAM role mapping is by selecting a common group naming convention. The relying party is a federation partner that is represented by a claims provider trust in the federation service. Option B is invalid because AD groups should not be matched to IAM Groups Option C is invalid because the relying party should be configured in Active Directory Federation services For more information on the federated access, please visit the following URL:1
