NEW QUESTION: 1 A customer plans to implement a network of x3550 M4 servers. Which of the following would allow installation of firmware updates?**A.** Tivoli Provisioning Manager**B.** VMware vSphere 5**C.** Tivoli Storage Manager**D.** ToolsCenter**Answer: D**

NEW QUESTION: 2 A vulnerability scanner report shows that a client-server host monitoring solution operating in the credit card corporate environment is managing SSL sessions with a weak algorithm which does not meet corporate policy. Which of the following are true statements? (Select TWO).**A.** The client-server handshake is based on TLS authentication.**B.** The client-server implements client-server mutual authentication with different certificates.**C.** The client-server handshake could not negotiate strong ciphers.**D.** The X509 V3 certificate is expired.**E.** The client-server handshake is configured with a wrong priority.**F.** The X509 V3 certificate was issued by a non trusted public CA.**Answer: C,E****Explanation:**The client-server handshake could not negotiate strong ciphers. This means that the system is not configured to support the strong ciphers provided by later versions of the SSL protocol. For example, if the system is configured to support only SSL version 1.1, then only a weak cipher will be supported. The client-server handshake is configured with a wrong priority. The client sends a list of SSL versions it supports and priority should be given to the highest version it supports. For example, if the client supports SSL versions 1.1, 2 and 3, then the server should use version 3. If the priority is not configured correctly (if it uses the lowest version) then version 1.1 with its weak algorithm will be used.

NEW QUESTION: 3 A small company has 5 servers and 50 clients. What are two reasons an engineer should split this network into separate client and server subnets? (Choose two)**A.** A router will limit the traffic types between the clients and servers.**B.** Subnets provide more IP address space for clients and servers.**C.** Subnets will split domains to limit failures.**D.** A router will bridge the traffic between clients and servers.**E.** Internet access to the servers will be denied on the router.**Answer: C,E**
