NEW QUESTION: 1Answer: Explanation:Explanation

NEW QUESTION: 2CORRECT TEXTYou are a network engineer with ROUTE.com, a small IT company. ROUTE.com has two connections to the Internet; one via a frame relay link and one via an EoMPLS link. ITpolicy requires that all outbound HTTP traffic use the frame relay link when it is available. All other traffic may use either link. No static or default routing is allowed. Choose and configure the appropriate path selection feature to accomplish this task. You may use the Test Workstation to generate HTTP traffic to validate your solution.**Answer:** Explanation:We need to configure policy based routing to send specific traffic along a paththat is different from the best path in the routing table. Here are the step by Step Solution for this: 1) First create the access list that catches the HTTP traffic: R1(config)#access-list 101 permit tcp any any eq www 2) Configure the route map that sets the next hop address to be ISP1 and permits the rest of the traffic: R1(config)#route-map pbr permit 10 R1(config-route-map)#match ip address 101 R1(config-route-map)#set ip next-hop 10.1.100.2 R1(config-route-map)#exit R1(config)#route-map pbr permit 20 3) Apply the route-map on the interface to the server in the EIGRP Network: R1(config-route-map)#exit R1(config)#int fa0/1 R1(config-if)#ip policy route-map pbr R1(config-if)#exit R1(config)#exit

NEW QUESTION: 3 Hotspot Question**Answer:** Explanation:702Explanation:The output of the above show command displays that the local DLCI number corresponding to the sub-interface of s1/0 whose IP address is 172.30.0.4 is 702.TheAnswer:frame-relay map ip 172.30.0.3 196 broadcastExplanation:Based on the output of the command "show frame-relay map",we know that DLCI mapped to the router S-AMER is 196. (.3 In the above network topology, the complete

Layer 3 IP address is 172.30.0.3)TheAnswer:The serial connection to the MidEast branch office. Explanation:On the basis of the configuration on Dubai provided in the exhibit, we know that the encapsulation types of different interfaces are as follows:Serial 1/0 : encapsulation frame-relaySerial 1/2 and Serial 1/3 : both interfaces are encapsulated PPPSerial 1/1: There is no related encapsulation information displayed, so its default encapsulation type is HDLC . Based on the network topology provided in the exhibit, the interface Serial 1/1 is connected to the router MidEast of the branch office, so the encapsulation type of the router MidEast is by default.The default encapsulation on a serial interface is HDLC. The original HDLC encapsulation was defined by the International Organization for Standards (ISO), those same folks who developed the OSI model. The ISO version of HDLC had one shortcoming, however; it had no options to support multiple Layer 3 routed protocols. As a result, most vendors have created their own form of HDLC. Cisco is no exception because it has its own proprietary form of HDLC to support various Layer 3 protocols such as IPX, IP, and AppleTalk.The Serial connection to the Dub<i branch office using the default encapsulation type. You can change using:* encapsulation <type> command on interfaceTheAnswer:EnableExplanation:In the diagram, DeepSouth is connected to Dubai's S1/2 interface and is configured as follows: Interface Serial1/2IP address 192.168.0.5 255.255.255.252Encapsulalation PPP ; Encapsulation for this interface is PPPCheck out the following Cisco Link: http://www.cisco.com/en/US/tech/tk713/tk507/technologies_configuration_example09186a00 80094333.shtml#configuringausernamedifferentfromtheroutersnameHere is a snipit of an example:If Router 1 initiates a call to Router 2, Router 2 would challenge Router 1, but Router 1 would not challenge Router 2. This occurs because the ppp authentication chap callin command is configured on Router 1. This is an example of a unidirectional authentication. In this setup, the ppp chap hostname alias-r1 command is configured on Router 1. Router 1 uses "alias-r1" as its hostname for CHAP authentication instead of "r1." The Router 2 dialer map name should match Router 1's ppp chap hostname; otherwise, two B channels are established, one for each direction.
