NEW QUESTION: 1You are a systems administrator for your company. The company has employees who work remotely by using a virtual private network (VPN) connection from their computers, which run Windows 8 Pro. These employees use an application to access the company intranet database servers. The company recently decided to distribute the latest version of the application through using a public cloud. Some users report that every time they try to download the application by using Internet Explorer, they receive a warning message that indicates the application could harm their computer. You need to recommend a solution that prevents this warning message from appearing, without compromising the security protection of the computers. What should you do? **A.** Publish the application through a public file transfer protocol (FTP) site. **B.** Change the default Applications Control Policies on the client computers. **C.** Change the default Software Restriction Policies on the client computers. **D.** Publish the application through an intranet web site. **E.** Instruct employees to disable the SmartScreen Filter from within the Internet Explorer settings. **F.** Digitally sign the application by using a trusted certificate, and then update the default App Package Deployment policy on all computers. **G.** Publish the application to Windows Store. **H.** Obtain a public certificate for the web server, and then configure the web site to use SSL. **Answer: G**
