NEW QUESTION: 4What is the primary role of cross certification?**A.** Creating trust between different PKIs**B.** Prevent the nullification of user certificates by CA certificate revocation**C.** set up direct trust to a second root CA**D.** Build an overall PKI hierarchy**Answer: A****Explanation:** Explanation/Reference:More and more organizations are setting up their own internal PKIs. When these independent PKIs need to interconnect to allow for secure communication to take place (either between departments or different companies), there must be a way for the two root CAs to trust each other. These two CAs do not have a CA above them they can both trust, so they must carry out cross certification. A cross certification is the process undertaken by CAs to establish a trust relationship in which they rely upon each other's digital certificates and public keys as if they had issued them themselves. When this is set up, a CA for one company can validate digital certificates from the other company and vice versa.
