24/7 after sale service - SAP Certified Development Associate - SAP Integration Suite exam dumps.

**NEW QUESTION: 1** Ein Frame, der in einen Switch eintritt, besteht die Frame-Check-Sequenz nicht. Welche zwei Schnittstellenzähler werden inkrementiert? (Wähle zwei) **A. Riesen B. CRCC. Rahmen D. Eingabefehler E. Runts**  
**Answer: B, D**  
**Explanation:** Whenever the physical transmission has problems, the receiving device might receive a frame whose bits have changed values. These frames do not pass the error detection logic as implemented in the FCS field in the Ethernet trailer. The receiving device discards the frame and counts it as some kind of input error. Cisco switches list this error as a CRC error. Cyclic redundancy check (CRC) is a term related to how the FCS math detects an error. The "input errors" includes runts, giants, no buffer, CRC, frame, overrun, and ignored counts. The output below show the interface counters with the "show interface s0/0/0" command:

**NEW QUESTION: 2** A customer is concerned about using fixed alarm settings to monitor elastic cloud workloads. They want assurance that virtual workload will be properly monitored in the cloud based on their environment's realtime data. Which vRealize Operations alarm feature will best address this concern? **A. Self-Learning Analytics B. Dynamic Thresholds C. AutoReactive Alarms D. Adaptive Alarms**  
**Answer: D**

**NEW QUESTION: 3** The steps of an access control model should follow which logical flow: **A. Identification, accountability, authorization B. Authorization, Identification, authentication C. Identification, authentication, authorization D. Authentication, Authorization, Identification**  
**Answer: C**  
**Explanation:** Reference: HARRIS, Shon, CISSP All In One Exam Guide. Chapter 4, pages 126-127. A very excellent discussion on this topic stating the steps and explaining the process of those steps is paraphrased (hopefully coherently) here: A user can identify themselves with a userid or account number. To be authenticated, a user usually provides a second piece of the credential set, like a password, passphrase, cryptographic key, anatomical attribute, a token or a Personal Identification Number, or PIN. Once the user provides credentials and is properly identified, the system needs to determine if the user has the necessary rights and privileges to do so. If the user DOES have those rights and privileges, he is authorized access.
