Do you wonder why so many peers can successfully pass AgileBA-Foundation exam, Many people have benefited from learning our AgileBA-Foundation learning braindumps.

NEW QUESTION: 1 You have an on-premises network that you plan to connect to Azure by using a site-to-site VPN.In Azure, you have an Azure virtual network named VNet1 that uses an address space of 10.0.0.0/16. VNet1 contains a subnet named Subnet1 that uses an address space of 10.0.0.0/24.You need to create a site-to-site VPN to Azure.Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.**Answer:** Explanation:Explanation:A Site-to-Site VPN gateway connection is used to connect your on-premises network to an Azure virtual network over an IPsec/IKE (IKEv1 or IKEv2) VPN tunnel. This type of connection requires a VPN device located on-premises that has an externally facing public IP address assigned to it. For more information about VPN gateways, see About VPN gateway.1. Create a virtual networkYou can create a VNet with the Resource Manager deployment model and the Azure portal2. Create the gateway subnet :The virtual network gateway uses specific subnet called the gateway subnet. The gateway subnet is part of the virtual network IP address range that you specify when configuring your virtual network. It contains the IP addresses that the virtual network gateway resources and services use.3. Create the VPN gateway :You create the virtual network gateway for your VNet. Creating a gateway can often take 45 minutes or more, depending on the selected gateway SKU.4. Create the local network gateway:The local network gateway typically refers to your on-premises location. You give the site a name by which Azure can refer to it, then specify the IP address of the on-premises VPN device to which you will create a connection. You also specify the IP address prefixes that will be routed through the VPN gateway to the VPN device. The address prefixes

you specify are the prefixes located on your on-premises network. If your on-premises network changes or you need to change the public IP address for the VPN device, you can easily update the values later.5. Configure your VPN device:Site-to-Site connections to an on-premises network require a VPN device. In this step, you configure your VPN device. When configuring your VPN device, you need the following:A shared key. This is the same shared key that you specify when creating your Site-to-Site VPN connection. In our examples, we use a basic shared key. We recommend that you generate a more complex key to use.The Public IP address of your virtual network gateway. You can view the public IP address by using the Azure portal, PowerShell, or CLI. To find the Public IP address of your VPN gateway using the Azure portal, navigate to Virtual network gateways, then click the name of your gateway.6. Create the VPN connection:Create the Site-to-Site VPN connection between your virtual network gateway and your on-premises VPN device.Reference: https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-howto-site-to-site-resource-manager-portal

NEW QUESTION: 2 To gather status and health information about the Avaya Aura® Call Center Elite Multichannel serverapplications, which application runs in a Microsoft server environment?**A.** Interaction Data Service**B.** XML Server**C.** Call Routing Server**D.** Application Management director**Answer: D**Explanation:Explanation/Reference:Reference: https://downloads.avaya.com/css/P8/documents/100166666 (p.15)

NEW QUESTION: 3 Which of the following is the GREATEST advantage of vulnerability scanning over penetration testing'?**A.** The testing process can be automated to cover large groups of assets**B.** Custom-developed applications can be tested more accurately**C.** The testing produces a lower number of false positive results**D.** Network bandwidth is utilized more efficiently.
Answer: D
