NEW QUESTION: 2 A security analyst discovered data such as images and word documents hidden within different types of files. Which of the following cryptographic concepts describes what was discovered?
A. Hashing
B. Steganography
C. Non-repudiation
D. Symmetric encryption
Answer: B
Explanation: Section: Cryptography Explanation/Reference: Explanation: Steganography is the process of concealing a file, message, image, or video within another file, message, image, or video. Note: The advantage of steganography over cryptography alone is that the intended secret message does not attract attention to itself as an object of scrutiny. Plainly visible encrypted messages, no matter how unbreakable will arouse interest, and may in themselves be incriminating in countries where encryption is illegal. Thus, whereas cryptography is the practice of protecting the contents of a message alone, steganography is concerned with concealing the fact that a secret message is being sent, as well as concealing the contents of the message.

NEW QUESTION: 3 Given the rule option `byte_jump:4,4,relative,align;`, how many bytes are being jumped?
