**NEW QUESTION: 1** ファブリックアクセスポイントについて正しい説明はどれですか。A. ローカルモードであり、ファブリック境界ノードに直接接続する必要があります。B. FlexConnectモードであり、ファブリック境界ノードに直接接続する必要があります。C. FlexConnectモードであり、ファブリックエッジスイッチに直接接続する必要があります。D. ローカルモードであり、ファブリックエッジスイッチに直接接続する必要があります。**Answer: D**  
Explanation: Fabric mode APs continue to support the same wireless media services that traditional APs support; apply AVC, quality of service (QoS), and other wireless policies; and establish the CAPWAP control plane to the fabric WLC. Fabric APs join as local-mode APs and must be directly connected to the fabric edge node switch to enable fabric registration events, including RLOC assignment via the fabric WLC. The fabric edge nodes use CDP to recognize APs as special wired hosts, applying special port configurations and assigning the APs to a unique overlay network within a common EID space across a fabric. The assignment allows management simplification by using a single subnet to cover the AP infrastructure at a fabric site.

**NEW QUESTION: 2** Which of the following documents would be the BEST reference to determine whether access control mechanisms are appropriate for a critical application? A. User security procedures B. IT security policy C. Business process flow D. Regulatory requirements **Answer: B**  
Explanation: IT management should ensure that mechanisms are implemented in line with IT security policy. Procedures are determined by the policy. A user security procedure does not describe the access control mechanism in place. The business process flow is not relevant to the access control mechanism. The organization's own policy and procedures should take into account regulatory requirements.
