The valid On-line test is intelligent and interesting, It's never too old to learn", preparing for a ACCESS-DEF certification is becoming a common occurrence.

NEW QUESTION: 1For CloudIVS3000, what are the operation entries for face search? (Choose two.)**A.** Capture a face from a person search result**B.** Capture a face for search during live video viewing**C.** Face Search tab page**D.** Capture a face for search during recording playback**Answer: A,D****Explanation:**Reference:<https://support.huawei.com/enterprise/br/doc/EDOC1100123467>

NEW QUESTION: 2An administrator receives notification of a new vulnerability threat from Symantec Deepsight Alert Services. The alert includes the name of an executable that should be prevented from running. Which policy should the administrator configure?**A.** Software Inventory policy**B.** Malware Blocking policy**C.** Custom Inventory policy**D.** Application Metering policy**Answer: B**

NEW QUESTION: 3Identify the type of authentication mechanism represented below:**A.** Kerberos**B.** LAN Manager Hash**C.** NTLMv2**D.** NTLMv1**Answer: A****Explanation:**Explanation/Reference:Explanation:The client authenticates itself to the Authentication Server (AS) which forwards the username to a key distribution center (KDC). The KDC issues a ticket granting ticket (TGT), which is time stamped, encrypts it using the user's password and returns the encrypted result to the user's workstation. This is done infrequently, typically at user logon; the TGT expires at some point, though may be transparently renewed by the user's session manager while they are logged in.When the client needs to communicate with another node ("principal" in Kerberos parlance) the client sends the TGT to the ticket granting service (TGS), which usually shares the same host as the KDC. After verifying the TGT is valid and the user is permitted to access the requested service, the TGS issues a ticket and session keys, which are returned to the client. The client then sends the ticket to the service server (SS) along with its service request.Reference: [http://en.wikipedia.org/wiki/Kerberos_\(protocol\)](http://en.wikipedia.org/wiki/Kerberos_(protocol))
