NEW QUESTION: 3A network administrator recently redistributed RIP routes into an OSPF domain.However, the administrator wants to configure the network so that instead of 32 external type-5 LSAs flooding into the OSPF network, there is only one.What must the administrator do to accomplish this?**A. Configure summarization on R1 with summary-address 172.16.32.0 255.255.224.0B. Configure area 1 as a stub area with area 1 stubC. Configure area 1 as a NSSA area with area 1 stub nssaD. Configure summarization on R1 with area 1 range 172.16.32.0 255.255.224.0Answer: A**Explanation:Explanation/Reference:Explanation:In many cases, the router doesn't even need specific routes to each and every subnet (for example, 172.16.1.0/24).It would be just as happy if it knew how to get to the major network (for example, 172.16.0.0/16) and let another router take it from there.In our telephone network example, the local telephone switch should only need to know to route a phone call to the switch for the called area code.Similarly, a router's ability to take a group of subnetworks and summarize them as one network (in other words, one advertisement) is called route summarization.Besides reducing the number of routing entries that a router must keep track

of, route summarization can also help protect an external router from making multiple changes to its routing table due to instability within a particular subnet. For example, let's say that we were working on a router that connected to 172.16.2.0/24. As we were working on the router, we rebooted it several times. If we were not summarizing our routes, an external router would see each time 172.16.2.0/24 went away and came back. Each time, it would have to modify its own routing table. However, if our external router were receiving only a summary route (i.e., 172.16.0.0/16), then it wouldn't have to be concerned with our work on one particular subnet. This is especially a problem for EIGRP, which can create stuck in active (SIA) routes that can lead to a network melt-down. Summarization Example We have the following networks that we want to advertise as a single summary route: * 172.16.100.0/24 * 172.16.101.0/24 * 172.16.102.0/24 * 172.16.103.0/24 * 172.16.104.0/24 * 172.16.105.0/24 * 172.16.106.0/24

NEW QUESTION: 4 Which protocol is used to signal the outer label for a VPN service? **A. RSVP** **B. TLDP** **C. IPCP** **D. Either RSVP or LDPE. PPP** **Answer: D**
