You avail our HPE2-B07 study guide in three formats, which can easily be accessed on all digital devices without any downloading any additional software.

NEW QUESTION: 1 Computer1 is located in an OU, and the GPO1, User1 is another OU, and as GPO2, to ensure you can apply GPO1 to User1 should be how to do? **A.** Gpupdate **B.** Security filtering **C.** GPOD. Inheritance **Answer: B** Explanation: Security Filtering: this is simply tweaking permission on the Group Policy Object for a subset of targets (targets = users and computers in the scope of a policy). Users and Computers need both "Read" and "Apply Group Policy" permission on the object to successfully apply the GPO. If we had a "LockDown" GP that restricts the desktop to a minimum and we would apply that to the "ManufacturingOU", all objects in that OU would be affected. To only apply the LockDown-GP to a number of targets, we can create an Active Directory group, put the target objects into the group and modify the security filtering settings in the "Scope" tab of the GP as shown in the screenshot: GPOs cannot be linked directly to users, computers, or security groups. They can only be linked to sites, domains and organizational units. However, by using security filtering, you can narrow the scope of a GPO so that it applies only to a single group, user, or computer. Security filtering is a way of refining which users and computers will receive and apply the settings in a Group Policy object (GPO). Using security filtering, you can specify that only certain security principals within a container where the GPO is linked apply the GPO. Security group filtering determines whether the GPO as a whole applies to groups, users, or computers; it cannot be used selectively on different settings within a GPO.
