NEW QUESTION: 3Carrier aggregation, if basic scheduling is used, on PCell and SCell, CAUE is regarded as an independent one to allocate resources, and the CAE rate is higher than non-CAE.**A.** False**B.** True**Answer: B**

NEW QUESTION: 4Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. The network contains a Microsoft Exchange Server 2010 organization. You plan to import the Exchange Server 2010 Management Pack. You need to configure Operation Manager to send Exchange-related notifications to Exchange Server administrators. What should you create first?**A.** an Exchange Server 2010 Send Connector**B.** a User Role**C.** an Exchange Server 2010 transport rule.**D.** a channel**E.** a monitor**Answer: D**
Explanation: Reference is Operations Manager also allows you to create custom roles based on the Operator, Read-Only Operator, Author, and Advanced Operator profiles. When you create

the role, you can further narrow the scope of groups, tasks, and views that the role can access. For example, you can create a role entitled "Exchange Operator" and narrow the scope to only Exchange-related groups, views, and tasks. User accounts assigned to this role will only be able to run Operator-level actions on Exchange-related objects. Notification Accounts and Groups Individuals in your company that will interact with Operations Manager frequently, such as an Exchange administrator who has been assigned to the Exchange Operator role, need a way to discover new alerts. This can be done by either watching the Operations console for new alerts or by Operations Manager informing them about the alert via supported communications channels. Operations Manager supports notifications through e-mail, instant messaging, Short Message Service, or pager messages. Notifications on what the role needs to know go out to recipients that you specify in Operations Manager. An Operations Manager recipient is merely an object that has a valid address to receive the notification, such as an SMTP address for e-mail notifications. Therefore, it is logical to combine role assignment with notification group membership via an e-mail-enabled security group. For example, create an Exchange Administrators security group and populate it with individuals that have the knowledge and permissions to fix things in Exchange. Assign this security group to a custom-created Exchange Administrator role so they have access to the data and are e-mail-enabled. Then, create a recipient by using the SMTP address of the e-mail-enabled security group.
