NEW QUESTION: 1Which two commands display the VLANs that are present in the VLAN database? (Choose two.)**A.** show vlan id**B.** show running-config**C.** show vlan**D.** show vlan brief**E.** show vlan database**Answer: C,E**

NEW QUESTION: 2**A.** COM 1**B.** BIOS**C.** Network Adapter**D.** Processor**Answer: A****Explanation:** ExplanationNamed pipe.This option connects the virtual serial port to a Windows named pipe on the host operating system or a computer on the network. A named pipe is a portion of memory that can be used by one process to pass information to another process, so that the output of one is the input of the other. The second process can be local (on the same computer as the first) or remote (on a networked computer). For example, a local named pipe path could be \.pipemypipename. Named pipes can be used to create a virtual null modem cable between two virtual machines, or between a virtual machine and a debugging program on the host operating system that supports the use of named pipes.By connecting two virtual serial ports to the same named pipe, you can create a virtual null modem cable connection. Named pipes are useful for debugging or for any program that requires a null modem connection.Named pipes can be used to connect to a virtual machine by configuring COM 1.References:
