NEW QUESTION: 1A solutions architect is designing a customer-facing application. The application is expected to have a variable amount of reads and writes depending on the time of year and clearly defined access patterns throughout the year. Management requires that database auditing and scaling be managed in the AWS Cloud. The Recovery Point Objective (RPO) must be less than 5 hours.Which solutions can accomplish this? (Select TWO.)**A.** Use Amazon Redshift Configure concurrency scaling. Enable audit logging. Perform database snapshots every 4 hours.**B.** Use Amazon RDS with auto scaling. Enable the database auditing parameter. Configure the backup retention period to at least 1 day.**C.** Use Amazon DynamoDB with auto scaling. Use on-demand backups and AWS CloudTrail.**D.** Use Amazon RDS with Provisioned IOPS. Enable the database auditing parameter. Perform database snapshots every 5 hours.**E.** Use Amazon DynamoDB with auto scaling. Use on-demand backups and Amazon DynamoDB Streams.**Answer: C,E**

NEW QUESTION: 2A company is designing an internet-facing web application. The application runs on Amazon EC2 for Linux-based instances that store sensitive user data in Amazon RDS MySQL Multi-AZ DB instances. The EC2 instances are in public subnets, and the RDS DB instances are in private subnets. The security team has mandated that the DB instances be secured against web-based attacks What should a solutions architect recommend?**A.** Ensure the EC2 instances are part of an Auto Scaling group and are behind an Application Load Balancer. Use AWS WAF to monitor inbound web traffic for threats Create a security group for the web application servers and a security group for the DB instances. Configure the RDS security group to only allow port 3306 inbound from the web application server security group. **B.** Ensure the EC2 instances are part of an Auto Scaling group and are behind an Application Load Balancer. Move DB instances to the same subnets that EC2 instances are located in. Create a security group for the DB instances. Configure the RDS security group to only allow port 3306 inbound from the individual EC2 instances**C.** Ensure the EC2 instances are part of an Auto Scaling group and are behind an Application Load Balancer. Use AWS WAF to monitor

inbound web traffic for threats Configure the Auto Scaling group lo automatically create new DB instances under heavy traffic Create a security group for the RDS DB instances. Configure the RDS security group to only allow port 3306 inbound**D.** Ensure the EC2 instances are part of an Auto Scaling group and are behind an Application Load Balancer. Configure the EC2 instance iptables rules to drop suspicious web traffic Create a security group for the DB instances Configure the RDS security group to only allow port 3306 inbound from the individual EC2 instances.**Answer: A**

NEW QUESTION: 3
コンサルタントがクライアントの利害関係者の目標を確実に満たすために、プロジェクト計画フェーズで実行できる2つのアクションはどれですか。（2つ選択してください。）**A.** プロジェクトの主要業績評価指標が有益であることを確認します。**B.** 利害関係者委員会と会議のスケジュールを確立します。**C.** すべての関係者に毎週送信されるスケジュールされたダッシュボードを作成します。**D.** クライアントの利害関係者の主要業績評価指標を取得します。**Answer: B,D**

NEW QUESTION: 4A. Option C**B.** Option A**C.** Option B**D.** Option E**E.** Option D**Answer: B,C,D**
Explanation:A: Starting with 12c, Oracle has unified all of the auditing types into one single unit called Unified auditing. You don't have to turn on or off all of the different auidting types individually and as a matter of fact auditing is enabled by default right out of the box. The AUD$ and FGA$ tables have been replaced with one single audit trail table. All of the audit data is now stored in Secure Files table thus improving the overall management aspects of audit data itself. B: Further the audit data can also be buffered solving most of the common performance related problems seen on busy environments.E: Unified Auditing is able to collect audit data for Fine Grained Audit, RMAN, Data Pump, Label Security, Database Vault and Real Application Security operations.Note:* Benefits of the Unified Audit TrailThe benefits of a unified audit trail are many: / (B) Overall auditing performance is greatly improved. The default mode that unified audit works is Queued Write mode. In this mode, the audit records are batched in SGA queue and is persisted in a periodic way. Because the audit records are written to SGA queue, there is a significant performance improvement./ The unified auditing functionality is always enabled and does not depend on the initialization parameters that were used in previous releases/ (A) The audit records, including records from the SYS audit trail, for all the audited components of your Oracle Database installation are placed in one location and in one format, rather than your having to look in different places to find audit trails in varying formats. This consolidated view enables auditors to co-relate audit information from different components. For example, if an error occurred during an INSERT statement, standard auditing can indicate the error number and the SQL that was executed. Oracle Database Vault-specific information can indicate whether this error happened because of a command rule violation or realm violation. Note that there will be two audit records with a distinct AUDIT_TYPE. With this unification in place, SYS audit records appear with AUDIT_TYPE set to Standard Audit./ The management and security of the audit trail is also improved by having it in single audit trail./ You can create named audit policies that enable you to audit the supported components listed at the beginning of this section, as well as SYS administrative users. Furthermore, you can build conditions and exclusions into your policies.*Oracle Database 12c Unified Auditing enables selective and effective auditing inside the Oracle database using policies and conditions. The new policy based syntax simplifies management of auditing within the database and provides the ability to accelerate auditing based on conditions.*The new architecture unifies the existing audit trails into a single audit trail, enabling simplified management and increasing the security of audit data generated by the database.
