NEW QUESTION: 1You manage an Exchange Server 2016 organization in an Active Directory forest that contains three sites. The sites are located in Chicago, Los Angeles, and New York. A database availability group (DAG) named DAG1 contains eight mailbox servers in the Los Angeles site and eight mailbox servers in the New York site. The servers run Windows Server 2012 R2. The Los Angeles and New York sites both have independent network access to the Chicago site. You need to configure the environment to provide the organization with the best chance of surviving a service outage if a site or a WAN link fails. Additionally, the New York site must be considered the primary data center and given preference for survival. Which two actions should you perform? Each correct answer presents part of the solution. **A.** Add an additional Exchange server to DAG1 and place it in the Chicago site. **B.** Add an additional Exchange server to DAG1 and place it in the New York site. **C.** Place the file share witness in the Chicago site. **D.** Place the cluster core resource group in the Chicago site. **E.** Place the cluster core resource group in the New York site. **F.** Place the file share witness in the New York site. **Answer: C, E** Explanation: Explanation You should place the file share witness in the Chicago site. Placing the file share witness in Chicago would give both New York and Los Angeles an opportunity to maintain quorum in the event that the other were to become unavailable. You should place the cluster core resource group in the New York site. Placing the cluster core resource group in New York would give that site an advantage toward maintaining quorum if the network link between New York and Chicago were to go down due to the arbitration delay. All members of the cluster except for the member owning the cluster core resource group must wait for a period of time equal to the arbitration delay before attempting to lock the file share witness (six seconds by default). The site with the member that locks the file share witness will maintain quorum. You should not place the file share witness in the New York site. A loss of the New York site would result in the cluster losing quorum across both sites and all databases dismounting. You should not add an additional Exchange server to DAG1 and place it in the New York site. Adding an additional Exchange server to the DAG in New York is incorrect because the DAG is already at its maximum capacity of sixteen nodes. You should not add an additional Exchange server to DAG1 and place it in the Chicago site. Adding an additional Exchange server to the DAG in Chicago is incorrect because the DAG is already at its maximum capacity of sixteen nodes. You should not place the cluster core resource group in the Chicago site. The cluster core resource group cannot be placed in Chicago because there are no cluster members

there, and you must place the file share witness there. The cluster core resource group cannot be owned by the file share witness server.

NEW QUESTION: 2 You have successfully gained access to a linux server and would like to ensure that the succeeding outgoing traffic from the server will not be caught by a Network Based Intrusion Detection System (NIDS). Which is the best way to evade the NIDS? **A.** Alternate Data Streams **B.** Out of band signaling **C.** Encryption **D.** Protocol Isolation **Answer: C**

NEW QUESTION: 3 A network engineer is planning to deploy a network management system (NMS) to monitor a large campus network. What is the most secure way to isolate the NMS network traffic to all monitored routers and switches? **A.** add the NMS IP address to the permissions for each device **B.** open only the appropriate ports on the routers and firewalls **C.** create a management VLAN for the NMS **D.** enable SNMPv3 on the switches **Answer: C**
