NEW QUESTION: 1HOTSPOTYou plan to deploy five virtual machines to a virtual network subnet.Each virtual machine will have a public IP address and a private IP address.Each virtual machine requires the same inbound and outbound security rules.What is the minimum number of network interfaces and network security groups that you require? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Hot Area:****Answer:** Explanation:Explanation/Reference:Explanation:Box 1: 10One public and one private network interface for each of the five VMs.Box 2: 1You can associate zero, or one, network security group to each virtual network subnet and network interface in a virtual machine. The same network security group can be associated to as many subnets and network interfaces as you choose.References:
<https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

NEW QUESTION: 2You have a Microsoft 365 subscription. Auditing is enabled.A user named User1 is a member of a dynamic security group named Group1.You discover that User1 is no longer a member of Group1.You need to search the audit log to identify why User1 was removed from Group1.Which two actions should you use in the search? To answer, select the appropriate activities in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:ExplanationReferences:
<https://docs.microsoft.com/en-us/office365/securitycompliance/search-the-audit-log-in-security-and-compliance>

NEW QUESTION: 3 A project manager is justifying a required change with the associated impact on the project. Which of the following is the NEXT step? **A.** Validation **B.** Approval **C.** Auditing **D.** Implementation **Answer: B**
Explanation: References: Kim Heldman, CompTIA Project+ Study Guide, 2nd Edition, Sybex, Indianapolis, 2017, p. 294

NEW QUESTION: 4 A company has external vendors that must deliver files to the company. These vendors have cross-account that gives them permission to upload objects to one of the company's S3 buckets. What combination of steps must the vendor follow to successfully deliver a file to the company? Select 2 answers from the options given below. Please select: **A.** Attach an IAM role to the bucket that grants the bucket owner full permissions to the object **B.** Encrypt the object with a KMS key controlled by the company. **C.** Add a grant to the objects ACL giving full permissions to bucket owner. **D.** Upload the file to the company's S3 bucket **E.** Add a bucket policy to the bucket that grants the bucket owner full permissions to the object **Answer: C, D**
Explanation: This scenario is given in the AWS Documentation. A bucket owner can enable other AWS accounts to upload objects. These objects are owned by the accounts that created them. The bucket owner does not own objects that were not created by the bucket owner. Therefore, for the bucket owner to grant access to these objects, the object owner must first grant permission to the bucket owner using an object ACL. The bucket owner can then delegate those permissions via a bucket policy. In this example, the bucket owner delegates permission to users in its own account. Option A and D are invalid because bucket ACL's are used to give grants to bucket. Option C is not required since encryption is not part of the requirement. For more information on this scenario please see the below Link: <https://docs.aws.amazon.com/AmazonS3/latest/dev/example-walkthroughs-managing-access-example3.html> The correct answers are: Add a grant to the objects ACL giving full permissions to bucket owner., Upload the file to the company's S3 bucket.
