When you are prepared for User-Experience-Designer exam, these exam questions and answers on ITexamGuide.com is absolutely your best assistant, These are what but not only User-Experience-Designer real exam dumps: Salesforce Certified User Experience Designer can create for you.

Photoexperienceacademy- Why Our IT Experts At Number #1 For Customer's Choice: 100% Real User-Experience-Designer Salesforce Exam Training Questions pdf.

NEW QUESTION: 1For which of the following postings to costing-based profitability analysis can you carry out a valuation?(Choose two)**A.** For transfer of billing documents.**B.** For incoming sales orders.**C.** For transfer cost center cost by assessment.**D.** For activity allocation.**Answer: A,B**

NEW QUESTION: 2You need to recommend a solution for storing customer data. What should you recommend?**A.** Azure Databricks**B.** Azure SQL Data Warehouse**C.** Azure Stream Analytics**D.** Azure SQL Database**Answer: A****Explanation:**ExplanationFrom the scenario:Customer data must be analyzed using managed Spark clusters.All cloud data must be encrypted at rest and in transit. The solution must support: parallel processing of customer data.References: <https://www.microsoft.com/developerblog/2019/01/18/running-parallel-apache-spark-notebook-workloads-on-az>Topic 1, Case study 1The company identifies the following business requirements:* External vendors must be able to perform custom analysis of data using machine learning technologies.* You must display a dashboard on the operations status page that displays the following metrics: telemetry, volume, and processing latency.* Traffic data must be made available to the Government Planning Department for the purpose of modeling changes to the highway system. The traffic data will be used in conjunction with other data such as information about events such as sporting events, weather conditions, and population statistics. External data used during the modeling is stored in on-premises SQL Server 2016 databases and CSV files stored in an Azure Data Lake Storage Gen2 storage account.* Information about vehicles that have been detected as going over the speed limit during the last 30 minutes must be available to law enforcement officers. Several law enforcement organizations may respond to speeding vehicles.* The solution must allow for searches of vehicle images by license plate to support law enforcement investigations. Searches must be able to be performed using a query language and must support fuzzy searches to compensate for license plate detection errors.**Telemetry Capture**The telemetry capture system records each time a vehicle passes in front of a sensor. The sensors run on a custom embedded operating

system and record the following telemetry data: * Time * Location in latitude and longitude * Speed in kilometers per hour (kmph) * Length of vehicle in meters

Visual Monitoring The visual monitoring system is a network of approximately 1,000 cameras placed near highways that capture images of vehicle traffic every 2 seconds. The cameras record high resolution images. Each image is approximately 3 MB in size.

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided. To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.

To start the case study To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.

Requirements Business The company identifies the following business requirements: * You must transfer all images and customer data to cloud storage and remove on-premises servers. * You must develop an analytical processing solution for transforming customer data. * You must develop an image object and color tagging solution. * Capital expenditures must be minimized. * Cloud resource costs must be minimized.

Technical The solution has the following technical requirements: * Tagging data must be uploaded to the cloud from the New York office location. * Tagging data must be replicated to regions that are geographically close to company office locations. * Image data must be stored in a single data store at minimum cost. * Customer data must be analyzed using managed Spark clusters. * Power BI must be used to visualize transformed customer data. * All data must be backed up in case disaster recovery is required.

Security and optimization All cloud data must be encrypted at rest and in transit. The solution must support: * parallel processing of customer data * hyper-scale storage of images * global region data replication of processed image data

NEW QUESTION: 3A. Option DB. Option BC. Option CD. Option A
Answer: D
Explanation: http://www.cisco.com/en/US/prod/collateral/iosswrel/ps6537/ps6586/ps6634/product_data_sheet0900aecd803137cf.html

Product Overview In today's business environment, network intruders and attackers can come from outside or inside the network. They can launch distributed denial-of-service attacks, they can attack Internet connections, and they can exploit network and host vulnerabilities. At the same time, Internet worms and viruses can spread across the world in a matter of minutes. There is often no time to wait for human intervention-the network itself must possess the intelligence to recognize and mitigate these attacks, threats, exploits, worms and viruses.

Cisco IOS Intrusion Prevention System (IPS) is an inline, deep-packet inspection-based solution that enables Cisco IOS Software to effectively mitigate a wide range of network attacks. While it is common practice to defend against attacks by inspecting traffic at data centers and corporate headquarters, distributing the network level defense to stop malicious traffic close to its entry point at branch or telecommuter offices is also critical.

Cisco IOS IPS: Major Use Cases and Key Benefits IOS IPS helps to protect your network in 5 ways:

Key Benefits: * Provides network-wide, distributed protection from many attacks, exploits, worms and viruses exploiting vulnerabilities in operating systems and applications. * Eliminates the need for a standalone IPS device at branch and telecommuter offices as well as small and medium-sized business networks. * Unique, risk rating based signature event action processor dramatically improves the ease of management of IPS

policies.* Offers field-customizable worm and attack signature set and event actions.* Offers inline inspection of traffic passing through any combination of router LAN and WAN interfaces in both directions.* Works with Cisco IOS Firewall, control-plane policing, and other Cisco IOS Software security features to protect the router and networks behind the router.* Supports more than 3700 signatures from the same signature database available for Cisco Intrusion Prevention System (IPS) appliances.
