NEW QUESTION: 1You are designing a Windows Presentation Foundation (WPF) application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010. The application will consist of a user interface (UI) tier and a middle tier. The middle tier will be implemented by using Windows Communication Foundation (WCF). You plan to design the exception handling strategy for the application. Each method in the middle tier will contain the following catch block. Catch e As Argument Null Exception Throw When testing the application, you discover that all Argument Null Exceptions that occur in the middle tier do not contain accurate stack trace information. What should you do?**A.** Create an Argument Null Exception handler in the UI tier.**B.** Remove the exception parameter from the Argument Null Exception handler**C.** Use a Dispatcher Unhandled Exception Event handler in the middle tier**D.** Use a Dispatcher Unhandled Exception Event handler in the UI tier.**Answer: B**Explanation:if yo rethrow the exception with the e Argument Null exception, your loose the stack trace.)This in C# is...Catch (ArgumentNullException e) { throw e; }You should substitute for:Catch (ArgumentNullException e) { throw; }From Book: If you catch an exception and determine that you cannot respond to it, add context information to the exception that is not already available within the stack trace, and then rethrow the exception by including the original exception using the new exception's InnerException property. This will pass the exception to a higher-level component or tier. If you cannot add any useful context information to the exception, simply call throw, rather than throw new <exception_object>, to avoid resetting the stack trace.

NEW QUESTION: 3 NO: 63 Which three requirements must be met to share Enhanced Location Based Call Admission Control bandwidth usage between clusters? (Choose three.)
A. SIP ICT must use the Shadow location.
B. The Cisco Unified Communications Manager version must be 8.6 or higher.
C. The Location Bandwidth Manager Service should be started on only two servers in each cluster.
D. A Location Bandwidth Manager Hub Group must be created for each cluster.
E. Links must be created to the Shadow location.
F. The location name must be the same on both clusters.
Answer: A,D,F
Explanation: Recommendations and Design Considerations for Unified CM Session Management Edition Deployments All leaf clusters that support E-L CAC should be enabled for intercluster E-L CAC with SME. SME can be used as a centralized bootstrap hub for the E-L CAC intercluster hub replication network. See LBM Hub Replication Network, for more information. All trunks to leaf clusters supporting E-L CAC should be SIP trunks placed in the shadow location to enable E-L CAC on the trunk between SME and the leaf clusters supporting E-L CAC. For TelePresence video interoperability, see the section on Call Admission Control Design Recommendations for TelePresence Video Interoperability Architectures. Connectivity from SME to any trunk or device other than a Unified CM that supports E-L CAC (some examples are third-party PBXs, gateways, Unified CM clusters prior to release 9.0 that do not support E-L CAC, voice messaging ports or trunks to conference bridges, than a phantom or shadow location. The reason for this is that both phantom and shadow locations are non-terminating locations; that is, they relay information about locations and are effectively placeholders for user-defined locations on other clusters. Phantom locations are legacy locations that allow for the transmission of location information in versions of Unified CM prior to 9.0, but they are not supported with Unified CM 9.x Enhanced Locations CAC. Shadow locations are special locations that enable trunks between Unified CM clusters that support E-L CAC to accomplish it end-to-end. SME can be used as a locations and link management cluster

NEW QUESTION: 4

HDInsight クラスターで毎日の Web トラフィック ログの分析を実行するプロセスを管理します。250 の Web サーバーのそれぞれが、毎日約ギガバイト (GB) のログデータを生成します。すべてのログデータは、Microsoft Azure Data Lake Storage Gen 2 の単一のフォルダーに保存されます。プロセスのパフォーマンスを改善する必要があります。

どちらの変更を加える必要がありますか？それぞれの正解は完全な解決策を提示します。

注：それぞれの正しい選択には 1 ポイントの価値があります。
A. ワーカーノードの数を増やす
B. すべてのサーバーの毎日のログファイルを 1 つのファイルに結合します
C.

mapreduce.map.memory パラメーターの値を増やします
D.

毎日のログが独自のフォルダーにあるように、ログファイルをフォルダーに移動します
E.

hive.tez.container.size パラメーターの値を増やします
Answer: B,D
Explanation:

A: Typically, analytics engines such as HDInsight and Azure Data Lake Analytics have a per-file overhead. If you store your data as many small files, this can negatively affect performance. In general, organize your data into larger sized files for better performance (256MB to 100GB in size). Some engines and applications might have trouble efficiently processing files that are greater than 100GB in size.
C: For Hive workloads, partition pruning of time-series data can help some queries read only a subset of the data which improves performance. Those pipelines that ingest time-series data, often place their files with a very structured naming for files and folders. Below is a very common example we see for data that is structured by date:

DataSet/YYYYMMDD/datafile_YYYY_MM_DD.tsv
Notice that the datetime information appears both as folders and in the filename.
