Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You need to ensure that authentication events are triggered and processed according to the policy.Solution: Create a new Azure Event Grid topic and add a subscription for the events.Does the solution meet the goal?**A. No****B. Yes****Answer: A****Explanation:**ExplanationInstead ensure that signout events have a subject prefix. Create an Azure Event Grid subscription that uses the subjectBeginsWith filter. Scenario: Authentication events are used to monitor users signing in and signing out. All authentication events must be processed by Policy service. Sign outs must be processed as quickly as possible.

**NEW QUESTION: 2**What technical control provides the most critical layer of defense if an intruder is able to bypass all physical security controls and obtain tapes containing critical data?**A. Camera Recordings****B. Encryption****C. Shredding****D. Security guards****E. Corrective Controls****Answer: B**

**NEW QUESTION: 3****A. Option A****B. Option D****C. Option B****D. Option C****Answer: D****Explanation:**ExplanationRefer AWS documentation - KMS GenerateDataKeyReturns a data encryption key that you can use in your application to encrypt data locally.You must specify the customer master key (CMK) under which to generate the data key. You must also specify the length of the data key using either the field. You must specify one field or the other, but not both. For common key lengths (128-bit and 256-bit symmetric keys), we recommend that you use KeySpec. To perform this operation on a CMK in a different AWS account, specify the key ARN or alias ARN in the value of the KeyId parameter.This operation returns a plaintext copy of the data key in the field of the response, and an encrypted copy of the data key in the CiphertextBlob encrypted under the CMK specified in the KeyId field of the request.
