To pursue you 100% satisfactory, the demos can 100% display the image of the NCP-MCA online test engine.

NEW QUESTION: 1A security engineer discovers that during certain times of day, the corporate wireless network is dropping enough packets to significantly degrade service. Which of the following should be the engineer's FIRST step in troubleshooting the issues?**A.** Change to a higher gain antenna**B.** Configure stronger encryption**C.** Increase the power level**D.** Perform a site survey**Answer: C**

NEW QUESTION: 2The only crime mentioned in the U.S. Constitution is:**A.** Extortion**B.** Fraud against the government**C.** Treason**D.** None of the above**E.** Murder**Answer: C**

NEW QUESTION: 3An organization is hosting a scalable web application using AWS. The organization has configured ELB and Auto Scaling to make the application scalable.Which of the below mentioned statements is not required to be followed for ELB when the application is planning to host a web application on VPC?**A.** The internet facing ELB should be only in a public subnet.**B.** The ELB and all the instances should be in the same subnet.**C.** Configure the security group rules and network ACLs to allow traffic to be routed between the subnets in the VPC.**D.** The internet facing ELB should have a route table associated with the internet gateway.**Answer: B****Explanation:**ExplanationAmazon Virtual Private Cloud (Amazon VPC) allows the user to define a virtual networking environment in a private, isolated section of the Amazon Web Services (AWS) cloud. The user has complete control over the virtual networking environment. Within this virtual private cloud, the user can launch AWS resources, such as an ELB, and EC2 instances. There are two ELBs available with VPC: internet facing and internal (private) ELB. For the internet facing ELB it is required that the ELB should be in a public subnet. After the user

creates the public subnet, he should ensure to associate the route table of the public subnet with the internet gateway to enable the load balancer in the subnet to connect with the internet. The ELB and instances can be in a separate subnet. However, to allow communication between the instance and the ELB the user must configure the security group rules and network ACLs to allow traffic to be routed between the subnets in his VPC.
