NEW QUESTION: 1You have an Azure subscription named Subscription1. Subscription1 contains two Azure virtual machines named VM1 and VM2. VM1 and VM2 run Windows Server 2016. VM1 is backed up daily by Azure Backup without using the Azure Backup agent. VM1 is affected by ransomware that encrypts data. You need to restore the latest backup of VM1. To which location can you restore the backup? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Box 1: VM1 only To restore files or folders from the recovery point, go to the virtual machine and choose the desired recovery point. Box 2: A new Azure virtual machine only On the Restore configuration blade, you have two choices: * Create virtual machine * Restore disks References: <https://docs.microsoft.com/en-us/azure/backup/backup-azure-restore-files-from-vm> <https://docs.microsoft.com/en-us/azure/backup/backup-azure-arm-restore-vm>

NEW QUESTION: 2Case study 1 - Litware Inc Background You are a developer for Litware Inc., a SaaS company that provides a solution for managing employee expenses. The solution consists of an ASP.NET Core Web API project that is deployed as an Azure Web App. Overall architecture Employees upload receipts for the system to process. When processing is complete, the employee receives a summary report email that details the processing results. Employees then use a web application to manager their receipts and perform any additional tasks needed for reimbursement. Receipt processing Employees may upload receipts in two ways: * Uploading using an Azure Files mounted folder * Uploading using the web application Data Storage Receipt and employee information is stored in an Azure SQL database. Documentation Employees are provided with a getting started document when they first use the solution. The documentation includes details on supported operating systems for Azure File upload, and instructions on how to configure the mounted folder. Solution details Users table Web Application You enable MSI for the Web App and configure the Web App to use the security principal name. Processing Processing is performed by an Azure Function that uses version 2 of the Azure Function runtime. Once processing is completed, results are stored in Azure Blob Storage and an Azure SQL database. Then, an email summary is sent to the user with a link to the processing report. The link to the report must remain valid if the email is forwarded to another user. Requirements Receipt processing Concurrent processing of a receipt must be prevented. Logging Azure Application Insights is used for telemetry and logging in both the processor and the web application. The processor also has TraceWriter logging enabled. Application Insights must always contain all log messages. Disaster recovery Regional outage must not impact application availability. All DR operations must not be dependent on application running and must ensure that data in the DR region is up to date. Security * Users' SecurityPin must be stored in such a way that access to the database does not allow the viewing of SecurityPins. The web

application is the only system that should have access to SecurityPins.* All certificates and secrets used to secure data must be stored in Azure Key Vault.* You must adhere to the Least Privilege Principal.* All access to Azure Storage and Azure SQL database must use the application's Managed Service Identity (MSI)* Receipt data must always be encrypted at rest.* All data must be protected in transit.* User's expense account number must be visible only to logged in users. All other views of the expense account number should include only the last segment with the remaining parts obscured.* In the case of a security breach, access to all summary reports must be revoked without impacting other parts of the system.

IssuesUpload format issueEmployees occasionally report an issue with uploading a receipt using the web application. They report that when they upload a receipt using the Azure File Share, the receipt does not appear in their profile. When this occurs, they delete the file in the file share and use the web application, which returns a 500 Internal Server error page.

Capacity issueDuring busy periods, employees report long delays between the time they upload the receipt and when it appears in the web application.

Log capacity issueDevelopers report that the number of log messages in the trace output for the processor is too high, resulting in lost log messages.

Processing.csDatabase.csReceiptUploader.csConfigureSSE.ps1Hotspot QuestionYou need to configure retries in the LoadUserDetails function in the Database class without impacting user experience. What code, should you insert on line DB07? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:
Explanation:Explanation:Box 1: PolicyRetryPolicy retry = Policy.Handle<HttpRequestException>().Retry(3);The above example will create a retry policy which will retry up to three times if an action fails with an exception handled by the Policy.Box 2: WaitAndRetryAsync(3,i => TimeSpan.FromMilliseconds(100* Math.Pow(2,i-1))); A common retry strategy is exponential backoff: this allows for retries to be made initially quickly, but then at progressively longer intervals, to avoid hitting a subsystem with repeated frequent calls if the subsystem may be struggling.Example:Policy.Handle<SomeExceptionType>().WaitAndRetry(3, retryAttempt =>TimeSpan.FromSeconds(Math.Pow(2, retryAttempt)));References: <https://github.com/App-vNext/Polly/wiki/Retry>
