The benefits of HPE6-A84 study materials for you are far from being measured by money, In order to serve you better, we have a complete system for HPE6-A84 exam materials.

**NEW QUESTION: 1**The Apache web server was recently installed on a Debian/Ubuntu server. The web server fails and a review of log messages on another partition reveals the installation was not completed properly due to lack of disk space. After clearing the files, the systems administrator has requested the installation to be performed again. Which of the following command lines will perform this task? (Choose two.)**A.** apt-get --purge remove apache2**B.** apt-get install apache2**C.** apt-get --reinstall apache2**D.** apt-get --reinstall install apache2

**Answer: A,B**

**NEW QUESTION: 2**Which statement is true about smallfile tablespaces?**A.** Segments can span multiple data files.**B.** Maximum file size can be set to unlimited only if the logical volume manager supports striping.**C.** Segments can span multiple tablespaces.**D.** The number of data files is constrained only by the size of the storage array.**E.** Extent location metadata is stored in the data dictionary by default.**Answer: A**

**NEW QUESTION: 3**DRAG DROP A user is unable to connect to the Internet. Based on the layered approach to troubleshooting and beginning with the lowest layer, drag each procedure on the left to its proper category on the right.**Answer:** Explanation:Explanation:The question asks us to "begin with the lowest layer" so we have to begin with Layer 1: verify physical connection; in this case an Ethernet cable connection. For your information, "verify Ethernet cable connection" means that we check if the type of connection (crossover, straight-through, rollover...) is correct, the RJ45 headers are plugged in, the signal on the cable is acceptable... Next we "verify NIC operation". We do this by simply making a ping to the loopback interface 127.0.0.1. If it works then the NIC card (layer 1, 2) and TCP/IP stack (layer 3) are working properly. Verify IP configuration belongs to layer 3. For example, checking if the IP can be assignable for host, the PC's IP is in the same network with the gateway... Verifying the URL by typing in your browser some popular websites like google.com, microsoft.com to assure that the far end server is not down (it sometimes make we think we can't access to the Internet). We are using a URL so this step belongs to layer 7 of the OSI model.

**NEW QUESTION: 4**ネットワークにActive Directoryドメインが含まれています。

ドメインには、Windows Server

2016を実行するDC1という名前のドメインコントローラーが含まれています。

DC1をディレクトリサービス復元モード (DSRM) で起動します。DC1上のActive

Directoryデータベースを圧縮する必要があります。どの3つのアクションを順番に実行しますか？

**Answer:** Explanation:Explanation:
