You may wonder how to prepare the D-CI-DS-23 actual test effectively, In this way, you can easily notice the misunderstanding in the process of reviewing, The punishment **D-CI-DS-23 Lead2pass** received by laziness is not only its own failure, but also the success of others.

**NEW QUESTION: 1** You plan to deploy Azure container instances. You have a containerized application that validates credit cards. The application is comprised of two containers: an application container and a validation container. The application container is monitored by the validation container. The validation container performs security checks by making requests to the application container and waiting for responses after every transaction. You need to ensure that the application container and the validation container are scheduled to be deployed together. The containers must communicate to each other only on ports that are not externally exposed. What should you include in the deployment?  
**A.** application security groups  
**B.** network security groups (NSGs)  
**C.** management groups  
**D.** container groups  
**Answer: D**  
Explanation: Azure Container Instances supports the deployment of multiple containers onto a single host using a container group. A container group is useful when building an application sidecar for logging, monitoring, or any other configuration where a service needs a second attached process.  
Reference:  
<https://docs.microsoft.com/en-us/azure/container-instances/container-instances-container-groups>

**NEW QUESTION: 2** A Solutions Architect is designing a highly available web application on AWS. The data served on the website is dynamic and is pulled from Amazon DynamoDB. All users are geographically close to one another. How can the Solutions Architect make the application highly available?  
**A.** Host the website data on Amazon S3 and set permissions to enable public read-only access for users.  
**B.** Host the application on EC2 instances in a single Availability Zone. Replicate the EC2 instances to a separate region, and use an Application Load Balancer for high availability.  
**C.** Host the web server data on Amazon CloudFront and update the objects in the CloudFront distribution when they change.  
**D.** Host the application on EC2 instances across

multiple Availability Zones. Use an Auto Scaling group coupled with an Application Load Balancer.**Answer: D**Explanation:  
<https://aws.amazon.com/cn/blogs/aws/amazon-rds-multi-az-deployment/>

**NEW QUESTION: 3** Was ist die Standardstufe für nice, wenn ein Prozess mit dem Befehl nice gestartet wird?**A. 0B. 1C. 2D. 3****Answer: D**
