Any ambiguous points may cause trouble to exam candidates, In order to meet different needs of the candidates, three versions for C\_FIORD\_2404 exam materials are available.

**NEW QUESTION: 1**The disk of an attributing system is filling.How should a DevOps engineer determine where the most content is stored in the CRX?**A.** Use the repository check in the web console**B.** Use the diskusage.sh script**C.** Use the disk usage report tool**D.** Use the jmx diskusage monitoring**Answer: B**

**NEW QUESTION: 2**An office printer that was working earlier in the day is no longer printing any documents. Pre-existing workstations are manually configured to print to the printer directly over the network. A technician has started to troubleshoot the problem and determines that the printer can still be seen in the network directory. The technician has also verified that the printer can print self-diagnostic pages successfully. Which of the following is the MOST likely cause of the problem?**A.** "Perform Printer Maintenance" message is displayed on the printer's LCD panel.**B.** The printer's IP address has changed.**C.** Two or more users sent print jobs simultaneously, causing a print collision.**D.** The network print spooler service has been restarted.**Answer: B**

**NEW QUESTION: 3**Drag and drop characteristics of PIM dense mode from the left to the right.**Answer:** Explanation:ExplanationPIM-DM supports only source trees - that is, (S,G) entries-and cannot be used to build a shared distribution tree.Reference:  
[https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/ipmulti\\_pim/configuration/xe-16-5/imc-pim-xe-16-5-book/im](https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/ipmulti_pim/configuration/xe-16-5/imc-pim-xe-16-5-book/im) PIM dense mode (PIM-DM) uses a push model to flood multicast traffic to every corner of the network. This push model is a brute-force method of delivering data to the

receivers. This method would be efficient in certain deployments in which there are active receivers on every subnet in the network. PIM-DM initially floods multicast traffic throughout the network. Routers that have no downstream neighbors prune the unwanted traffic. This process repeats every 3 minutes. A rendezvous point (RP) is required only in networks running Protocol Independent Multicast sparse mode (PIM-SM). In PIM dense mode (PIM-DM), multicast traffic is initially flooded to all segments of the network. Routers that have no downstream neighbors or directly connected receivers prune back the unwanted traffic.
