NEW QUESTION: 2There is an AS-path-filter, ip as-path-filter 1 permit

Related Posts100(_100)*(_400)*, which AS-PATH attribute cannot be matched by the As-path-filter?**A.** 100 400**B.** 100 400 400 400**C.** 100 200 900**D.** 0**Answer: C**

NEW QUESTION: 3You have a computer that runs Windows 7. The computer is in a workgroup. You need to ensure that you can decrypt Encrypting File System (EFS) files on the computer if you forget your password. What are two possible ways to achieve this goal? (Each correct answer presents a complete solution. Choose two.)**A.** From User Accounts, select Manage your file encryption certificates.**B.** From Authorization Manager, modify the Authorization Manager options.**C.** From Credential Manager, select Back up vault.**D.** From User Accounts, select Create a password reset disk.**Answer: A, D****Explanation:**Password reset disksIt is not unusual for users to forget their passwords to local user accounts from time to time, especially when they use strong passwords. Before the advent of password reset disks, the only way for administrators to restore a forgotten local user account password was to manually reset the user's password. In the process, the following information was lost:

- *E-mail that was encrypted with the user's public key*
- *Internet passwords that were saved on the computer*
- *Files that the user had encrypted*

Password reset disks offer another solution to the problem of a forgotten password for a local user account. If users create password reset disks for their local accounts before they forget their passwords, they can reset the passwords without losing valuable data that was lost previously with administrative password resets. When you create a password reset disk, a public key and private key pair are created. The private key is stored on a disk: the password reset disk. The public key encrypts the local user account password. If users forget their passwords, they can insert the password reset disk, which contains the private key, and decrypt the current password. The Forgotten Password Wizard prompts the user for a new password, which is then encrypted with the public key. Data is not lost because, basically, the user is simply changing a password. It is essential that password reset disks be stored in secured locations.

NEW QUESTION: 4 You are evaluating Office 365 ProPlus for a company. For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point. **Answer:** Explanation:
