If someone who worry about failed the EX294 exam, our website can guarantee that they can get full refund, We provide in-depth EX294 study material in the form of EX294 PDF dumps questions answers that will allow you to prepare yourself for the exam.

Quick Reference Guide, Sixth Edition (Test Prep series) by Andy Crowe EX294 (Author) is a fast way for anyone preparing for the EX294 Exam.

**NEW QUESTION: 1**Case Study: 4 - Dress4Win case studyCompany OverviewDress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model.Company Background Dress4win's application has grown from a few servers in the founder's garage to several hundred servers and appliances in a collocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster, Dress4win is committing to a full migration to a public cloud.Solution ConceptFor the first phase of their migration to the cloud, Dress4win is considering moving their development and test environments. They are also considering building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them.Existing Technical EnvironmentThe Dress4win application is served out of a single data center location.Databases:MySQL - user data, inventory, static dataRedis - metadata, social graph, cachingApplication servers:Tomcat - Java micro-servicesNginx - static contentApache Beam - Batch processingStorage appliances: iSCSI for VM hostsFiber channel SAN - MySQL databasesNAS - image storage, logs, backups Apache Hadoop/Spark servers:Data analysisReal-time trending calculationsMQ servers: MessagingSocial notificationsEventsMiscellaneous servers:Jenkins, monitoring, bastion hosts, security scannersBusiness RequirementsBuild a reliable and reproducible environment with scaled parity of production. Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud.Improve business agility and speed of innovation through rapid provisioning of new resources.Analyze and optimize architecture for performance in the cloud. Migrate fully to the cloud if all other requirements are met.Technical RequirementsEvaluate and choose an automation framework for

provisioning resources in cloud. Support failover of the production environment to cloud during an emergency. Identify production services that can migrate to cloud to save capacity. Use managed services whenever possible. Encrypt data on the wire and at rest. Support multiple VPN connections between the production data center and cloud environment.

**CEO Statement** Our investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a new competitor could use a public cloud platform to offset their up-front investment and freeing them to focus on developing better features.

**CTO Statement** We have invested heavily in the current infrastructure, but much of the equipment is approaching the end of its useful life. We are consistently waiting weeks for new gear to be racked before we can start new projects. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle.

**CFO Statement** Our capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years puts a cloud strategy between 30 to 50% lower than our current model.

For this question, refer to the Dress4Win case study. At Dress4Win, an operations engineer wants to create a low-cost solution to remotely archive copies of database backup files. The database files are compressed tar files stored in their current data center. How should he proceed?

**A.** Create a Cloud Storage Transfer Service job to copy the files to a Regional Storage bucket.  
**B.** Create a Cloud Storage Transfer Service Job to copy the files to a Coldline Storage bucket.  
**C.** Create a cron script using gsutil to copy the files to a Coldline Storage bucket.  
**D.** Create a cron script using gsutil to copy the files to a Regional Storage bucket.

**Answer: C**

**Explanation:** Follow these rules of thumb when deciding whether to use gsutil or Storage Transfer Service: When transferring data from an on-premises location, use gsutil. When transferring data from another cloud storage provider, use Storage Transfer Service. Otherwise, evaluate both tools with respect to your specific scenario. Use this guidance as a starting point. The specific details of your transfer scenario will also help you determine which tool is more appropriate

**NEW QUESTION: 2** Refer to exhibit. VLANs 50 and 60 exist on the trunk links between all switches. All access ports on SW3 are configured for VLAN 50 and SW1 is the VTP server. Which command ensures that SW3 receives frames only from VLAN 50?

**A.** SW1 (config)#vtp pruning  
**B.** SW3(config)#vtp mode transparent  
**C.** SW2(config)=vtp pruning  
**D.** SW1 (config) =>vtp mode transparent

**Answer: A**

**NEW QUESTION: 3** Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named adatum.com. The domain contains two DHCP servers named Server1 and Server2. Server1 has the following IP configuration. Server2 has the following IP configuration. Some users report that sometimes they cannot access the network because of conflicting IP addresses. You need to configure DHCP to avoid leasing addresses that are in use already.

**Solution:** On Server1, you modify the ActivatePolicies setting of the scope. Does this meet the goal?

**A.** No  
**B.** Yes

**Answer: A**
