NEW QUESTION: 2 A firm is considering a project whose estimated cash flows have indicated a payback period of 3.68 years. It requires an initial outlay of \$1,000 and has end-of-year cash flows of \$350, \$270 and \$225 in the first 3 years. The firm's marginal discount rate is 9%. The project's projected cash flow for year 4 equals _____. **A. 0B. 1C. 2D. 3Answer: D**
Explanation: Explanation/Reference: Explanation: The payback period is defined as the expected number of

years that would be required to recover the original investment. In particular, Payback period = Years before full recovery + (unrecovered cost at the start of payback year)/(net cash flow in the payback year) In this case, the recovery occurs in the 3rd year. At the beginning of the 3rd year, the unrecovered cost equals $1,000 - 350 - 270 - 225 = 155$. If total cash flow in the 4th year equals C, then payback period = $3 + 155/C = 3.68$ years. Solving for C gives C = 228. Note that the discount rate does not figure in the calculation of payback period.

NEW QUESTION: 3 What does the Cisco Transformative Networking engagement method require?
A. An understanding of the Zachman framework
B. The project manager to hold CCIE certification
C. A high-level understanding of Enterprise Business Architecture
D. A thorough understanding of TOGAF
Answer: C
