Free update within one year, But, in case, you fail in CDCP Certified Data Centre Professional (CDCP)e Exam , so you can claim for refund, The test dumps that we offer for Certified Data Centre Professional (CDCP) at a Photoexperienceacademy are unique in many ways.

NEW QUESTION: 1A. Option A**B.** Option D**C.** Option B**D.** Option C**Answer: B**Explanation:AWS is introducing a free usage tier for one year to help the new AWS customers get started in Cloud. The free tier can be used for anything that the user wants to run in theCloud. AWS offers a handful of AWS services as a part of this which includes 750 hours of free micro instances and 750 hours of ELB. It includes the AWS S3 of 5 GB and AWS EBS general purpose volume up to 30 GB. PIOPS is not part of free usage tier.

NEW QUESTION: 2 Which statement is true about Fast Link Pulses in Ethernet?**A.** They are used during collision detection.**B.** They are part of UniDirectional Link Detection.**C.** They are used during autonegotiation.**D.** They are used only if the media type is optical.**Answer: C** Explanation:To make sure that your connection is operating properly, IEEE 802.3 Ethernet employs normal link pulses (NLPs),which are used for verifying link integrity in a 10BaseT system. This signaling gives you the link indication when youattach to the hub and is performed between two directly connected link interfaces (hub-to-station or station-to-station). NLPs are helpful in determining that a link has been established between devices, but they are not a goodindicator that your cabling is free of problems.An extension of NLPs is fast link pulses. These do not perform link tests, but instead are employed in the autonegotiation process to advertise a device's capabilities.Reference: http://www.cisco.com/en/US/docs/internetworking/troubleshooting/guide/tr1904.html

NEW QUESTION: 3A security administrator notices a recent increase in workstations becoming compromised by malware. Often, the malware is delivered via drive-by downloads, from malware hosting websites, and is not being detected by the corporate antivirus. Which of the following solutions would provide the BEST protection for the company?**A.** Deploy a web based gateway antivirus server to intercept viruses before they enter the network.**B.** Increase the frequency of antivirus downloads and install updates to all workstations.**C.** Deploy a WAF to inspect and block all web traffic which may contain malware and exploits.**D.** Deploy a cloud-based content filter and enable the appropriate category to prevent further infections. **Answer: D**Explanation:The undetected malware gets delivered to the company via drive-by and malware hosing websites. Display filters and Capture filters when deployed on the cloud-based content should provide the protection required.Incorrect Answers:A: The company already has an antivirus application that is not detecting the malware, increasing the frequency of antivirus downloads and installing the updates will thus not address the issue of the drive-by downloads and malware hosting websites.C: A WAF is designed to sit between a web client and a web server to analyze OSI Layer 7 traffic; this will not provide the required protection in this case. WAFs are not 100% effective.D: A web-based gateway antivirus is not going to negate the problem of drive-by downloads and malware hosting websites.References:Gregg, Michael, and Billy Haines, CASP CompTIA Advanced Security Practitioner Study Guide, John Wiley & Sons, Indianapolis, 2012, pp. 116, 405-406

NEW QUESTION: 4현재 프라이빗 서브넷에 배포 된 응용 프로그램 서버에는 타사와 통합 할 수있는 기능이 필요합니다인터넷을 통해 액세스 할 수 있는 서비스.인바운드를 제공하지 않고 VPC에서 아웃 바운드 인터넷 연결을 제공하기 위해 필요한 변경 사항응용 프로그램 서버에 대한 인터넷 연결?**A.** 인터넷 게이트웨이를 VPC에 연결하지 않고 NAT 게이트웨이를 만듭니다.**B.** NAT 게이트웨이를 생성하고 인터넷 게이트웨이를

VPC에 연결합니다.**C.** NAT 게이트웨이를 만들지 않고 인터넷 게이트웨이를 VPC에 연결합니다.**D.** 가상 프라이빗 게이트웨이를 VPC에 연결하고 NAT 게이트웨이를 생성합니다.**Answer: B**Explanation: ExplanationNAT Gateway BasicsTo create a NAT gateway, you must specify the public subnet in which the NAT gateway should reside. For more information about public and private subnets, see Subnet Routing. You must also specify an Elastic IP address to associate with the NAT gateway when you create it. After you've created a NAT gateway, you must update the route table associated with one or more of your private subnets to point Internet-bound traffic to the NAT gateway. This enables instances in your private subnets to communicate with the internet. Each NAT gateway is created in a specific Availability Zone and implemented with redundancy in that zone.You have a limit on the number of NAT gateways you can create in an Availability Zone. For more information, see Amazon VPC Limits.NoteIf you have resources in multiple Availability Zones and they share one NAT gateway, in the event that the NAT gateway's Availability Zone is down, resources in the other Availability Zones lose internet access. To create an Availability Zone-independent architecture, create a NAT gateway in each Availability Zone and configure your routing to ensure that resources use the NAT gateway in the same Availability Zone.If you no longer need a NAT gateway, you can delete it. Deleting a NAT gateway disassociates its Elastic IP address, but does not release the address from your account.The following diagram illustrates the architecture of a VPC with a NAT gateway. The main route table sends internet traffic from the instances in the private subnet to the NAT gateway. The NAT gateway sends the traffic to the internet gateway using the NAT gateway's Elastic IP address as the source IP address.
