NEW QUESTION: 2Why is a high CRC error rate in L2 protocol analysis software NOT always a valid indicator of network performance? (Choose 3)**A.** If protocol analysis software is not properly configured with frame decryption parameters, it can't accurately calculate a CRC, which includes the encrypted frame body contents.**B.** Layer 2 protocol analysis can only collect and interpret data that is received properly at the MAC layer, and cannot quantify some PHY-layer problems.**C.** Radio and antenna hardware used for protocol analysis may not match the receive sensitivity, diversity, MIMO, or antenna gain capabilities of the network WLAN hardware.**D.** If the protocol analysis radio hardware is not located in the same area as intended client devices or APs, its data sampling may not be representative of actual traffic on the network.**Answer: B,C,D**

外部ソースからの問い合わせ中に到達しました：処理された合計1行のうち1行が拒否されました。

D.

内部エラーのため、外部テーブルへのアクセスに失敗しました：「外部ファイルへのアクセス中に、HdfsBridge_Connectへの呼び出しでJava例外が発生しました：エラー[スキームのFileSystemなし：wasbs]が発生しました。」 **Answer: C** Explanation: Explanation Customer Scenario: SQL

Server 2016 or SQL DW connected to Azure blob storage. The CREATE EXTERNAL TABLE DDL

points to a directory (and not a specific file) and the directory contains files with different

schemas. SSMS Error: Select query on the external table gives the following error: Msg 7320,

Level 16, State 110, Line 14 Cannot execute the query "Remote Query" against OLE DB provider

"SQLNCLI11" for linked server "(null)". Query aborted-- the maximum reject threshold (0 rows)

was reached while reading from an external source: 1 rows rejected out of total 1 rows

processed. Possible Reason: The reason this error happens is because each file has different

schema. The PolyBase external table DDL when pointed to a directory recursively reads all the

files in that directory. When a column or data type mismatch happens, this error could be seen

in SSMS. Possible Solution: If the data for each table consists of one file, then use the filename in

the LOCATION section prepended by the directory of the external files. If there are multiple files

per table, put each set of files into different directories in Azure Blob Storage and then you can

point LOCATION to the directory instead of a particular file. The latter suggestion is the best

practices recommended by SQLCAT even if you have one file per table.
