Is there any assistance from Photoexperienceacademy Training in terms of **C-THR84-2405 Reliable Test Answers** exam preparation, It is always relevant to the real exam as it is regularly updated by the best industry professional s.

As you can see, they still keep up with absorbing new knowledge of our C-THR84-2405 training questions, The content is approved by a number of C-THR84-2405 professionals who have an extensive exposure of the real exam scenario.

Details are researched and produced by C-THR84-2405 Answers Experts who are constantly using industry experience to produce precise, logical verify for the test.

NEW QUESTION: 1A critical US-CERT notification is published regarding a newly discovered botnet. The malware is very evasive and is not reliably detected by endpoint antivirus software. Furthermore, SSL is used to tunnel malicious traffic to command-and-control servers on the internet and SSL Forward Proxy Decryption is not enabled.Which component once enabled on a perimeter firewall will allow the identification of existing infected hosts in an environment?**A.** Anti-Spyware profiles applied outbound security policies with DNS Query action set to sinkhole **B.** Antivirus profiles applied to outbound security policies with action set to alert**C.** File Blocking profiles applied to outbound security policies with action set to alert**D.** Vulnerability Protection profiles applied to outbound security policies with action set to block**Answer: A**
Explanation:Starting with PAN-OS 6.0, DNS sinkhole is an action that can be enabled in Anti-Spyware profiles. A DNS sinkhole can be used to identify infected hosts on a protected network using DNS traffic in environments where the firewall can see the DNS query to a malicious URL.The DNS sinkhole enables the Palo Alto Networks device to forge a response to a DNS query for a known malicious domain/URL and causes the malicious domain name to resolve to a definable IP address (fake IP) that is given to the client. If the client attempts to access the fake IP address and there is a security rule in place that blocks traffic to this IP, the information is recorded in the logs.

NEW QUESTION: 2You execute the command to recover your database:Which statement is true?**A.** It restores all data files and control files from the most recent backup taken before the "until time", and then recovers up to the "until time" using any restored archive logs that are

needed to complete the task.**B.** It restores the control file and all data files from the most recent backups, and then applies the redo logs up to the "until time".**C.** It restores all data files from the specified time, and then applies the redo logs.**D.** It restores all data files, redo log files, and control files, and then applies the redo logs up to the specified time.**Answer: A**
Explanation: UNTIL TIME = 'date_string' specifies a time as an upper limit. RMAN selects only files that can be used to restore and recover up to but not including the specified time. RMAN can perform recovery of the whole database to a specified past time, SCN, or log sequence number. This type of recovery is sometimes called incomplete recovery because it does not completely use all of the available redo. Incomplete recovery of the whole database is also called database point-in-time recovery (DBPITR). DBPITR requires restoring your database from an older backup, then performing media recovery until your specified target time, SCN or log sequence number. Note that because you need your archived redo log files to perform this process, you cannot perform database point-in-time recovery if you have been running your database in NOARCHIVELOG mode.
