NEW QUESTION: 2What is the proper term to refer to a single unit of IP data?**A.** IP datagram.**B.** IP segment.**C.** IP frame.**D.** IP fragment.**Answer:** **A**Explanation:IP is a datagram based technology.DIFFERENCE BETWEEN PACKETS AND DATAGRAMAs specified at: [http://en.wikipedia.org/wiki/Packet_\(information_technology\)](http://en.wikipedia.org/wiki/Packet_(information_technology))In general, the term packet applies to any message formatted as a packet, while the term datagram is generally reserved for packets of an "unreliable" service.A "reliable" service is one that notifies the user if delivery fails, while an "unreliable" one does not notify the user if delivery fails. For example, IP provides an unreliable service.Together, TCP and IP provide a reliable service, whereas UDP and IP provide an unreliable one. All these protocols use packets, but UDP packets are generally called datagrams.If a network does not guarantee packet delivery, then it becomes the host's responsibility to provide reliability by detecting and retransmitting lost packets. Subsequent experience on the ARPANET indicated that the network itself could not reliably detect all packet delivery failures, and this pushed responsibility for error detection onto the sending host in any case. This led to the development of the end-to-end principle, which is one of the Internet's fundamental design assumptions.The following answers are incorrect:IP segment. Is incorrect because IP segment is a detractor, the correct terminology is TCP segment. IP is a datagram based technology.IP frame. Is incorrect because IP frame is a detractor, the correct terminology is Ethernet frame. IP is a datagram based technology.IP fragment. Is incorrect

because IP fragment is a detractor. References: Wikipedia

NEW QUESTION: 3 A business impact assessment is one element in business continuity planning. What are the three primary goals of a BIA? **A.** Facility requirements planning, facility security management, and administrative personnel controls. **B.** Criticality prioritization, downtime estimation, and resource requirements. **C.** Data processing continuity planning, data recovery plan maintenance, and testing the disaster recovery plan. **D.** Scope and plan initiation, business continuity plan development, and plan approval and implementation. **Answer: B**
Explanation: Explanation/Reference: Explanation: The first business impact assessment (BIA) task facing the BCP team is identifying business priorities. The second quantitative measure that the team must develop is the maximum tolerable downtime (MTD). The final step of the BIA is to prioritize the allocation of business continuity resources to the various risks that you identified and assessed in the preceding tasks of the BIA. Incorrect Answers: **A:** Continuity planning and data recovery planning are not part of the BIA. **B:** Business continuity plan development is not part of the BIA. **C:** Facility planning is not part of the BIA.
