## System Administration Certification Dump

C-TADM-23 braindumps vce is helpful for candidates who are urgent for C-TADM-23 certification, It is very good to experience the simulate environment in advance.

By passing the exams multiple times on practice test software, you will be able to pass the real C-TADM-23 test in the first attempt, This C-TADM-23 package includes latest questions and verified answers from the C-TADM-23 exam.

Once you choose our products, you choose C-TADM-23 Exam Collection high-efficiency exam preparation materials which will help you pass exam for sure, Our SAP C-TADM-23 study material can help you pass the exam and keep or even elevate your position in the area.

In this way, you have a general understanding of our C-TADM-23 actual prep exam, which must be beneficial for your choice of your suitable exam files, We have 24/7 customer assisting **C-TADM-23 Certification Dump** support you if you have any problems in the course of purchasing or downloading.

**NEW QUESTION: 1**Hardening a system is one of the practical methods of securing a computer system. Which of the following techniques is used for hardening a computer system?**A.** Applying egress filtering**B.** Disabling all user accounts**C.** Applying Access Control List (ACL)**D.** Applying a patch to the OS kernel**Answer: D**

**NEW QUESTION: 2**You have an Azure subscription named Subscription1 that contains a resource group named RG1.In RG1. you create an internal load balancer named LB1 and a public load balancer named LB2.You need to ensure that an administrator named Admin 1 can manage LB1 and LB2. The solution must follow the principle of least privilege.Which role should you assign to Admin1 for each task? To answer, select the appropriate options in the answer area.NOTE: Caen correct selection is worth one point.**Answer:** Explanation:Explanation Box 1: Network Contributor on RG1To add to the backend pool, write permission is required on the Resource Group because it writes deployment information. To add a backend pool, you need network contributor role on the LB and on the VMs that will be part of the backend pool. For this reason the network contributor role must be assigned to the RG where the LB and the VM resides. So the correct answer is Network Contributor on RG1 .Box 2: Network Contributor on RG1For Health Probe also, without having access to RG1, no health probe can be added. If only Network Contributor role is assigned to LB then the user would not be able to access the IP addresses of the member pools.Owner/Contributor can give the user access for everything. So it will not fit into the the principle of least privilege. Hence Owner and contributor role is incorrect choices for the question.Reference: <https://docs.microsoft.com/en-us/azure/role-based-access-control/built-in-roles>

**NEW QUESTION: 3**Refer to the exhibit.No OSPF neighborship exists between N5K-1 and N7K-1. Which configuration resolves this issue?**A.** (config)# router ospf 1(config-router)# network 192.168.103.152 0.0.0.3 area 0**B.** (config)# ip router ospf 1 area 0**C.** (config)# router ospf 1 (config-router)# network 192.168.103.152 255.255.255.252 area 0**D.** (config-rf)# ip router ospf 1 area 0**Answer: A**
