NEW QUESTION: 2 SIMULATION Lab Simulation Question - EIGRP CCNA.com has a small network that is using EIGRP as its IGP. All routers should be running an EIGRP AS number 12. Router MGT is also running static routing to the ISP. CCNA.com has recently adding the ENG router. Currently, the ENG router does not have connectivity to the ISP router. All other interconnectivity and Internet access for the existing locations of the company are working properly. The task is to identify the fault(s) and correct the router configuration(s) to provide full connectivity between the routers. Access to the router CLI can be gained by clicking on the appropriate host. All passwords on all routers are cisco. IP addresses are listed in the chart below. MGT Fa0/0-192.168.77.33 S1/0-198.0.18.6 S0/0-192.168.27.9 S0/1-192.168.50.21 ENG Fa0/0-192.168.77.34 Fa1/0-192.168.12.17 Fa0/1-192.168.12.1 Parts1 Fa0/0-192.168.12.33 Fa0/1-192.168.12.49 S0/0-192.168.27.10 Parts2 Fa0/0-192.168.12.65 Fa0/1-192.168.12.81 S0/1-192.168.50.22 **Answer:** Explanation: Please see explanation Explanation/Reference: Explanation: First we should check the configuration of the ENG Router. running-config startup-configSome Modification in QuestionAfter adding ENG router, no
routing updates are being exchanged between MGT and the new location. All other inter
connectivity for the existing locations of the company are working properly.But Internet
connection for existing location including Remote1 and Remote2 networks are not working.
Faults Identified:1. Incorrect Autonomous System Number configured in ENG router.2. MGT
router does not advertise route to the new router ENG.3. Internet Connection is not working all
stations.We need to correct the above two configuration mistakes to have full connectivity
Steps:1. ENG Router:Change the Autonomous System Number of ENG2. Perimeter Router: Add
the network address of interface of Perimeter that link between MGT and ENG.3. Perimeter
Router: Add default route and default-network.Check the IP Address of S1/0 interface of MGT
Router using show running-config command.(The interfaced used to connect to the ISP)!
interface Serial1/0ip address 198.0.18.6 255.255.255.252!For Internet sharing we have created a
default route, and add default-network configuration. The IP address is 198.0.18.6/30. Then the
next hop IP will be 198.0.18.5.ENG RouterENG>enablePassword: cisco ENG# conf tENG(config)#
no router eigrp 22ENG(config)# router eigrp 22ENG(config-router)# network 192.168.60.0

Password: cisco MGT# conf tMGT(config)# router eigrp 22MGT(config-router)# network
192.168.77.0MGT(config-router)# exitMGT(config)# ip route 0.0.0.0 0.0.0.0 198.0.18.5
MGT(config)# ip default-network 198.0.18.0MGT(config)# exitMGT# copy running-config
startup-configImportant:If you refer the topology and IP chart, the MGT router uses Fa0/0 to
connect ENG router, S0/0 used to connect Remote1, and S0/1 used to connect Remote2.Refer
to the command show running-config, the command #PASSIVE-INTERFACE <Interface Name>
will deny EIGRP updates to specified interface. In that case we need to use #no

```

passive-interface <Interface Name> to allow the routing updates to be passed to that interface. For example, when used the #show run command and we see the output like below.!

```
router eigrp 22network 192.168.77.0network 192.168.60.0passive-interface FastEthernet 0/0
passive-interface Serial 1/0no auto-summary!
```

Then the command would beMGT(config)#router eigrp 22MGT(config-router)#no passive-interface Fa0/0MGT(config-router)#endAlso MGT router connect to the ISP router using Serial 1/0. If you see passive-interface s1/0, then do not remove it using #no passive-interface s1/0 command.

NEW QUESTION: 3 DRAG DROP You need to recommend the VPN protocols for Proseware. What should you recommend? To answer, drag the appropriate VPN protocols to the correct offices. Each protocol may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer: Explanation: Explanation: Explanation: Box 1: IKEv2 An IKEv2 VPN provides resilience to the VPN client when the client moves from one wireless hotspot to another or when it switches from a wireless to a wired connection. This meets the requirement that users in the New York office must be able to reconnect to the remote access VPN servers automatically. Box 2: SSTP SSTP is the only of the listed tunneling protocols that uses SSL, and users in the Chicago office must use SSL to connect to the remote access VPN servers.
