**NEW QUESTION: 3**Which two statements about using the CHAP authentication mechanism in a PPP link are true? (Choose two.)**A. CHAP uses a three-way handshake.B. CHAP authentication is performed only upon link establishment.C. CHAP authentication periodically occurs after link establishment.D. CHAP authentication passwords are sent in plaintext.E. CHAP has no protection from playback attacks.F. CHAP uses a two-way handshake.****Answer: A,C****Explanation:** Understanding and Configuring PPP CHAP AuthenticationOne-Way and Two-Way AuthenticationCHAP is defined as a one-way authentication method. However, you use CHAP in both directions to create a two-way authentication. Hence, with two-wayCHAP, a separate three-way handshake is initiated by each side. In the Cisco CHAP implementation, by default, the called party must authenticate the calling party (unless authentication is completely turned off). Therefore, a one-way authentication initiated by the called party is the minimum possible authentication. However, the calling party can also verify the identity of the called party, and this results in a two-way authentication. One-way authentication is often required when you connect to non-Cisco devices.Reference:
