NEW QUESTION: 3**A. Option BB. Option AC. Option CD. Option D****Answer: B,C****Explanation:** Note:*DBMS_REDACT.FULL completely redacts the column data.*DBMS_REDACT.NONE applies no redaction on the column data. Use this function for development testing purposes. LOB columns are not supported.*The DBMS_REDACT package provides an interface to Oracle Data Redaction, which enables you to mask (redact) data that is returned from queries issued by low-privileged users or an application.*If you create a view chain (that is, a view based on another view), then the Data Redaction policy also applies throughout this view chain. The policies remain in effect all of the way up through this view chain, but if another policy is created for one of these views, then for the columns affected in the subsequent views, this new policy takes precedence.

NEW QUESTION: 4Which three are the components of SNMP? (Choose three)**A. SNMP AgentB. SetC. SNMP ManagerD. SysLog ServerE. MIB****Answer: A,C,E****Explanation:**SNMP is an application-layer protocol that provides a message format for communication between SNMP managers and agents. SNMP provides a standardized framework and a common language used for the monitoring and management of devices in a network.The SNMP framework has three parts:+ An SNMP manager+ An SNMP agent+ A Management Information Base (MIB)The SNMP manager is the system used to control and monitor the activities of network hosts using SNMP. The most common managing system is called a Network ManagementSystem (NMS). The term NMS can be applied to either a dedicated device used for network management, or the applications used on such a device. A variety of network management applications are available for use with SNMP. These features range from simple command-line applications to

feature-rich graphical user interfaces (such as the CiscoWorks2000 line of products). The SNMP agent is the software component within the managed device that maintains the data for the device and reports these data, as needed, to managing systems. The agent and MIB reside on the routing device (router, access server, or switch). To enable the SNMP agent on a Cisco routing device, you must define the relationship between the manager and the agent. The Management Information Base (MIB) is a virtual information storage area for network management information, which consists of collections of managed objects.
