NEW QUESTION: 1Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.You have a virtual machine (VM) in Microsoft Azure, which has a 2 terabyte (TB) database. Microsoft SQL Server backups are performed by using Backup to URL.You need to provision the storage account for the backups while minimizing costs.Which storage option should you use?**A.** Premium P30 disk storage**B.** Standard zone redundant blob storage**C.** Standard geo-redundant blob storage**D.** Standard geo-redundant disk storage**E.** Premium P10 disk storage**F.** Standard locally redundant blob storage**G.** Standard locally redundant disk storage**H.** Premium P20 disk storage**Answer: F**
Explanation:Explanation/Reference:Explanation:A URL specifies a Uniform Resource Identifier (URI) to a unique backup file. The URL is used to provide the location and name of the SQL Server backup file. The URL must point to an actual blob, not just a container. If the blob does not exist, it is created. If an existing blob is specified, BACKUP fails, unless the "WITH FORMAT" option is specified to overwrite the existing backup file in the blob.LOCALLY REDUNDANT STORAGE (LRS) makes multiple synchronous copies of your data within a single datacenter. Incorrect Answers:F: Zone redundant blob storage would be me more expensive as it stores three copies of data across multiple datacenters within or across regions.References:

NEW QUESTION: 4 Which of the following are valid ways of Grouping Data?
A. Using Labels in the View B. From the Dimensions Shelf C. Using Marks in the view D. From the Analytics Pane
Answer: A, B, C
Explanation: Explanation
IMPORTANT QUESTION AND EXPLANATION, PLEASE READ
3 ways to group data - 1) Marks 2) Labels 3) Dimensions shelf.
IMPORTANT
If we Group the data by selecting the marks, then they remain separate marks in the view and then have the same colour. Also, a new group is created in the Dimensions shelf.
Example - Using the sample superstore dataset, first plot a bar chart showing sales for each sub-category:
Here, if we Select Phones, Chairs and Storage by selecting the MARKS (Bars), and then group them: They remain separate marks (BARS) but are grouped by the same colour.
Now, if we didn't do this, and rather grouped by selecting their Labels (Names): Then they no longer remain separate Marks (bars) but are rather consolidated into a single Bar:
Finally, we can group directly from the Dimensions shelf as follows:
Now choose Phones, Chairs and Storage and Click Group: You will now automatically have a new Dimension as follows:
