NEW QUESTION: 1The user HR receives the following error while inserting data into the TTKtable: Upon investigation, you find that SMD is a small file tablespace. Which three actions would allow the user to insert data? (Choose three.)
A. Resize the data file associated with the SMD tablespace to make it larger.
B. Add a data file to the temporary tablespace associated with the user HR.
C. Alter the data file associated with the SMD tablespace to grow automatically.
D. Change the segment space management for the SMD tablespace to automatic.
E. Add a data file to the SMD tablespace.
Answer: A,C,E
Explanation: Explanation/Reference: Explanation: The Oracle docs note this on the ora-01653 error: ORA-01653: unable to extend table string.string by string in tablespace string Cause: Failed to allocate an extent of the required number of blocks for a table segment in the tablespace indicated. Action: Use ALTER TABLESPACE ADD DATAFILE statement to add one or more files to the tablespace indicated. Oracle MOSC Documents offer great resources on resolving ORA-01653, namely the nature of the problem as it relates to space availability:-----This error does not necessarily indicate whether or not you have enough space in the tablespace, it merely indicates that Oracle could not find a large enough area of free contiguous space in which to fit the next extent. Diagnostic Steps:-----1. In order to see the free space available for a particular tablespace, you must use the view DBA_FREE_SPACE. Within this view, each record represents one fragment of space. How the view DBA_FREE_SPACE can be used to determine the space available in the database is described in Note 121259.1 Using DBA_FREE_SPACE Furthermore, MOSC offers these choices in resolving ORA-01653 (as quoted below): Manually COALESCE Adjacent Free Extents Add a DATAFILE Resize DATAFILE Enable AUTOEXTEND Defragment tablespace View temporary segments for space

NEW QUESTION: 2

リモートアクセスサーバーを使用してユーザーのログオンパスワードを認証サーバーに転送し、システムへのアクセスを許可または拒否するのは、次のうちどれですか。
A. TKIP **B.** TACACS **C.** AES **D.** WPA2-PSK
Answer: B

NEW QUESTION: 3 Drag and Drop Question A database named DB2 uses the InMemory query mode. Users frequently run the following query: You need to reconfigure the SSAS instance that hosts DB1. Which three actions should perform in sequence? To answer, move the appropriate

actions from the list of actions to the answer area and arrange them in the correct order.

Answer: Explanation:Explanation:Step 1: Set the default mode for the data model to DirectQuery. You discover that the project has been deployed with the Direct Query Mode option set to OFF.Step 2: Set the mode for the FactInternetSales table's partition to DirectQueryOnly. Initially, even DirectQuery models are always created in memory. The default query mode for the workspace database is also set to DirectQuery with In-Memory. This hybrid working mode lets you use the cache of imported data for improved performance during the model design process, while validating the model against DirectQuery requirements.From Scenario: Most queries that use the SalesAnalysis data model use data from a table named FactInternetSales that is 20 gigabyte (GB) in size. Cached data must be available for the FactInternetSales table. All queries accessing the SalesAnalysis model must be executed in near real time.Step 3: Run Process Full for the FactInternetSales partition. When Process Full is executed against an object that has already been processed, Analysis Services drops all data in the object, and then processes the object. This kind of processing is required when a structural change has been made to an object, for example, when an attribute hierarchy is added, deleted, or renamed

NEW QUESTION: 4An attacker attempted to compromise a web form by inserting the following input into the username field: admin)(|(password=*))Which of the following types of attacks was attempted?**A.** SQL injection**B.** Command injection**C.** Cross-site scripting**D.** LDAP injection

Answer: DExplanation:LDAP Injection is an attack used to exploit web based applications that construct LDAP statements based on user input. When an application fails to properly sanitize user input, it's possible to modify LDAP statements using a local proxy. This could result in the execution of arbitrary commands such as granting permissions to unauthorized queries, and content modification inside the LDAP tree. The same advanced exploitation techniques available in SQL Injection can be similarly applied in LDAP Injection. In a page with a user search form, the following code is responsible to catch input value and generate a LDAP query that will be used in LDAP database. <input type="text" size=20 name="userName">Insert the username</input> The LDAP query is narrowed down for performance and the underlying code for this function might be the following: String ldapSearchQuery = "(cn=" + \$userName + ")"; System.out.println(ldapSearchQuery);If the variable \$userName is not validated, it could be possible accomplish LDAP injection, as follows: If a user puts "*" on box search, the system may return all the usernames on the LDAP base If a user puts "jonys) (| (password = *)", it will generate the code bellow revealing jonys' password (cn = jonys) (| (password = *))
