NEW QUESTION: 1 Amazon Elastic File System (EFS) provides information about the space used for an object by using the `space_used` attribute of the Network File System Version 4.1 (NFSv4.1). The attribute includes the object's current metered data size and not the metadata size. Which of the following utilities will you use to measure the amount of disk that is used of a file?
A. `du` utility **B.** `blkid` utility **C.** `sfdisk` utility **D.** `pydf` utility
Answer: A
Explanation: Amazon EFS reports file system sizes and sizes of objects within a file system. Using the NFSv4.1 `space_used` attribute for measuring the space used for an object, it reports only the object's current metered data size and not the metadata size. There are two utilities available for measuring disk usage of a file, the `du` and `stat` utilities.

NEW QUESTION: 2 During a project's execution, a modification in a data entry specification is made. Due to the modification three model defects are identified for repair. What should the project manager do?
A. Enter change log items. **B.** Escalate to the project sponsor. **C.** Update the risk register. **D.** Submit change requests.
Answer: C

NEW QUESTION: 3 You manage a Dynamics 365 environment for Sales. You create the following rule items to respond to inbound emails from potential customers:
* Emails that contain the words support or help must create a new high-priority case.
* Emails that contain the words buy or purchase must create a warm-lead record. The words buy and purchase are more important than support or help.
* Emails that specifically mention ProductA must always create a hot lead for that product regardless of other words mentioned.
* If none of the targeted words are present in an email, a cold lead must be created.
You need to configure the order in which rule items are processed. In which order should you run the rule items? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.
