However, only a very few people seize the initiative in their life.

NEW QUESTION: 1 プロファイラが処理するデバイスの数を制限することにより、どの内部Cisco ISEコンポーネントがJVMメモリの需要を減らしますか？**A. eventHandlerQueueSize****B.**

maxEndpointsInLocalDb**C. NetworkDeviceEventHandler****D. forwarderQueueSize****Answer: D**

Explanation:Explanation To ensure that the profiler does not increase the JVM memory utilization and prevent JVM to go out of memory and restart, limits are applied to the following internal components of the profiler:
*Endpoint Cache-Internal cache is limited in size that has to be purged periodically (based on least recently used strategy) when the size exceeds the limit.
*Forwarder-The main ingress queue of endpoint information collected by the profiler.
*Event Handler-An internal queue that disconnects a fast component, which feeds data to a slower processing component (typically related to a database query).
Cisco ISE Profiler Queue Size Limits
*forwarderQueueSize = 5000 (endpoint collection events)
*eventHandlerQueueSize = 10000 (events)
