NEW QUESTION: 1 Which of the following features characterize routing protocols? (Choose all that apply.)
A. Responsibility for path determination and traffic switching.
B. Operates at the Data-Link Layer of the OSI reference model.
C. Upper-layer protocols existing in a given protocol suite.
D. Operates at the highest layer of the OSI reference model.
E. Operates at the Network Layer of the OSI reference model.
Answer: A, E
Explanation: D: Routing protocols make routers work together. Routers keep track of the networks they are directly connected to, as well as other routers on the networks in order to forward packets to foreign networks. A router maintains this info in its routing table and periodically shares information from that table to other routers on the network. This info is used to determine the best route for an incoming packet to take its destination. E: Routing protocols operate at the Network Layer of the OSI model. Reference: CCDA Study guide by Damon Merchant. Syngress Press
Incorrect Answers: A: It operates at the Network Layer (Layer 3) of the OSI model. B: They operate at Layer 3. It will not use upper layer protocols. C: Routing protocols operates network layer instead of session layer.
