Software version of PDII test dumps - Providing simulation test system, several times of setup with no restriction, They are compelled to care about the PDII test cost, exam voucher, exam cram, exam dumps or exam collection.

NEW QUESTION: 1Select and Place:**Answer:** Explanation:

NEW QUESTION: 2The remote clients are receiving SQLCODE -30062 RDB ACCESS FAILURE, which means access to the database failed because the session data is expired. How can you increase the number of minutes that applications can remain inactive before the associated session data token becomes invalid because of timeout?**A.** Change the RESOURCE TIMEOUT field (IRLMRWT subsystem parameter)**B.** Change the POOL THREAD TIMEOUT field (POOLINAC subsystem parameter)**C.** Issue the -MODIFY DDF SESSIDLE command to increase session timeout**D.** Change the UTILITY TIMEOUT field (UTIMOUT subsystem parameter)**Answer: B**

NEW QUESTION: 3Which of the following is true about PKI? (Select TWO).**A.** When encrypting a message with the private key, only the public key can decrypt it.**B.** When encrypting a message with the public key, only the public key can decrypt it.**C.** When encrypting a message with the public key, only the CA can decrypt it.**D.** When encrypting a message with the public key, only the private key can decrypt it.**E.** When encrypting a message with the private key, only the private key can decrypt it.**Answer: A, D**Explanation: E: You encrypt data with the private key and decrypt with the public key, though the opposite is much more frequent. Public-key cryptography, also known as asymmetric cryptography, is a class of cryptographic protocols based on algorithms that require two separate keys, one of which is secret (or private) and one of which is public. Although different, the two parts of this keypair are mathematically linked. D: In a PKI the sender encrypts the data using the receiver's public key. The receiver decrypts the data using his own private key. PKI is a two-key, asymmetric system with four main components: certificate authority (CA), registration authority (RA), RSA (the encryption algorithm), and digital certificates. Messages are encrypted with a public key and decrypted with a private key. A PKI example: You want to send an encrypted message to Jordan, so you request his public key. Jordan responds by sending you that key. You use the public key he sends you to encrypt the message. You send the message to him. Jordan uses his private key to decrypt the message.

NEW QUESTION: 4Which of the following is a user defined data type?**1:** struct person { char name[20]; int age; };**2:** int l=2;**3:** enum color {red,blue, green};**D.** char c;**A. 0B. 1C. 2D. 3****Answer: A, B**
