버킷에서 수명주기 구성 규칙 구성 **Answer: D** Explanation: Explanation The AWS Documentation

mentions the following on lifecycle policies Lifecycle configuration enables you to specify the lifecycle management of objects in a bucket. The configuration is a set of one or more rules, where each rule defines an action for Amazon S3 to apply to a group of objects. These actions can be classified as follows: Transition actions - In which you define when objects transition to another. For example, you may choose to transition objects to the STANDARD_IA (IA, for infrequent access) storage class 30 days after creation, or archive objects to the GLACIER storage class one year after creation. Expiration actions - In which you specify when the objects expire. Then Amazon S3 deletes the expired objects on your behalf. Option A and C are invalid because neither bucket policies nor IAM policy's can control the purging of logs. Option D is invalid. CORS is used for accessing objects across domains and not for purging of logs. For more information on AWS S3 Lifecycle policies, please visit the following URL: [com/AmazonS3/latest/dg/Configuring-lifecycle-configuration-rules-on-the-S3-bucket.html](https://aws.amazon.com/AmazonS3/latest/dg/Configuring-lifecycle-configuration-rules-on-the-S3-bucket.html).
