NEW QUESTION: 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have a data warehouse that stored sales data. One fact table has 100 million rows.You must reduce storage needs for the data warehouse.You need to implement a solution that uses column-based storage and provides real-time analytics for the operational workload.Solution: You load the data in a heap table.Does the solution meet the goal?**A. Yes****B. No****Answer: B**Explanation:It is better to use a clustered index.Columnstore indexes are the standard for storing and querying large data warehousing fact tables. It uses column-based data storage and query processing to achieve up to 10x query performance gains in your data warehouse over traditional row-oriented storage, and up to 10x data compression over the uncompressed data size.In SQL Server, rowstore refers to table where the underlying data storage format is a heap, a clustered index, or a memory-optimized table.References:
